Data processing

In paragraph 1.1.1, the **number of active cows** refers to cows still present on the 31st of December 2021 in a herd with active Official Milk Recording (=MR) contract and for which at least one milk record has been registered throughout the year 2021.

In paragraph 1.1.2, the **number of active herds** refers to herds with active Official Milk Recording contract on the 31st of December 2021 and with at least one active cow taken in account over the year (and still present in this herd on the 31st of December 2021).

Annual milk recording results (starting at paragraph 1.2) have been calculated on 30 January 2022 by the Genetic Information Processing Centre (in accordance with the French National Institute for Agricultural Research [INRA] specifications) and processed by the Institut de l'Elevage. These results take into account **one lactation per cow; the last terminated one** (with a calving date after January 1st, 2018). This rule involves that the primiparous still on lactation are therefore not counted up in these results.

These terminated lactations may be qualified or not. The non-qualified ones are taken into account into the calculation of the terminated lactations' overall total (see paragraph 1.1.3) and are classified according to the cause of non-qualification (cf. paragraph 1.3.2) but are not included in the calculation of milk yield and contents results.

The herds for which lactation results are calculated are the only ones taken into account in this document. This total is therefore slightly higher than the number of « active herds » (see results presented in paragraph 1.1) because it takes into account some herds that have been controlled during the previous year but were not active anymore after the 31st of December 2021.

Into the paragraph 1.3.2, the proportion of the non-qualified lactations due to cause of non-qualification 1 (i.e excessively long interval between calving and the 1st test-date) related to a herd with first MR contract is determined as follows:

The first condition is that the date of beginning of the lactation, (= calving date) taken into account in the current results must be prior to the starting date of MR contract of the herd the cow belongs to (link between a cow and a herd is searched at the last test-date in milk of the cow).

In case this first condition is met, one determines whether a previous MR contract did exist for the relevant herd:

- if so, the interval between the date when the previous MR contract ended and the starting date of the next MR contract is calculated. If this interval is over 365 days long, it is considered as a first MR contract for the relevant herd,
- if not so, it is also considered as a first MR contract for the relevant herd.

Only local areas (= French « départements ») for which more than 40 lactations results counted up are in tables 3.2, 3.4 and 3.6. The results presented in tables 3.3, 3.5 and 3.7 take into account only breeds for which at least 40 lactations have been counted up in the corresponding local area.

This document has been produced with the substantial assistance in programming of Mrs N. Weiswald (Genetic Information Processing Centre in Jouy-en-Josas).

Trends for 2021

32,669 herds provided 2,064,131 qualified lactations in 2021. Decreasing respectively from 6.1% and 6.2% the herd number and the number of qualified lactations confirm the trend observed since several years.

The three main French national breeds (Prim'Holstein, Montbéliarde and Normande) represent henceforth 90.6% of the total of qualified lactations (-0.4% compared to 2020).

With 46.8% the percentage of herds with more than 60 qualified lactations is stable in 2021, confirming the end of the rising trend observed the previous year (46.8 in 2020, 47.5 in 2019, 45.1% in 2018 and 40.1% in 2017). In the same time, with 68.8% the rate of qualified lactations they represent follow the same trend (68.8 in 2020, 69% in 2019, 66.9% in 2018 and 63.1% in 2017).

With an average milk production for complete lactations at 8,887 Kg, the milk yield is increasing in 2021 (+ 180kg). In the same time the average lactation duration reach 344 days (+4 days). Mean fat and protein rates reach respectively to 40.6 g/kg for fat (+0.1) and 32.9 g/kg for proteins (+0.1).

A noticeable improvement in somatic cell count situation is again observed. The proportion of lactations for which all the test-dates obtain cell counts lower than 300.000 cells and the proportion of lactations having at least 2 test-dates with cell counts higher than 800.000 reach respectively 54.1% et 11.3%.

TABLE OF CONTENTS

| | |
|--|------------|
| I - NATIONAL RESULTS | 7 |
| 1.1 - Total milk recorded population | 7 |
| 1.1.1 - Total number of active herds on December, 31st, 2021* | 7 |
| 1.1.2 - Total number of active cows on December, 31st, 2021* | 7 |
| 1.1.3 - Terminated lactations | 8 |
| 1.1.3.1 - <i>Total number of herds with terminated lactations</i> | 8 |
| 1.1.3.2 - <i>Total number of terminated lactations</i> | 9 |
| 1.2 - Qualified lactations | 10 |
| 1.2.1 - Complete lactations | 11 |
| 1.2.1.1 - <i>Total number of herds which provided complete lactation results</i> | 11 |
| 1.2.1.2 - <i>Total number of complete lactations</i> | 11 |
| 1.2.2 - Herds distribution per total number of lactations | 13 |
| 1.2.3 - Complete lactations per parity | 14 |
| 1.2.3.1 - <i>Number and percentage of results per parity</i> | 14 |
| 1.2.3.2 - <i>Average results of complete lactations per parity (1st, 2nd, 3rd, 4th and over)</i> | 14 |
| 1.2.4 - Complete lactations per month of calving - all lactations and first lactations | 16 |
| 1.2.5 - 305-d lactations (= reference lactations) | 17 |
| 1.2.6 - Adjusted lactations | 19 |
| 1.2.7 - Evolution of the individual cell count results | 21 |
| 1.3 - Lactation qualification | 22 |
| 1.3.1 - Qualified lactations per qualification method | 22 |
| 1.3.2 - Qualified lactations per milk recording method | 24 |
| 1.3.3 - Qualified lactations per milk recording protocol | 24 |
| 1.3.4 - Distribution of non-qualified lactations by cause of non-qualification | 25 |
| 1.4 - Herd distribution per milk yield level | 26 |
| II - RESULTS PER BREED | 27 |
| 2.1 - Complete lactations - all lactations | 27 |
| 2.2 - Reference lactations (305-d) - all lactations | 28 |
| 2.3 - Adjusted lactations - all lactations | 29 |
| 2.4 - Adult 305-day adjusted lactations - all lactations | 30 |
| 2.5 - Number of pure-bred herds per breed | 31 |
| 2.6 - Detailed results per breed | 32 |
| III - RESULTS PER LOCAL AREA (= FRENCH « DÉPARTEMENT ») | 57 |
| 3.1.a - Qualified lactations per protocol and local area | 57 |
| 3.1.b - Qualified lactations per method and local area | 60 |
| 3.2 - Complete lactations per local area - all breeds - all lactations | 63 |
| 3.3 - Complete lactations - all lactations per local area and breed | 65 |
| 3.4 - Complete lactations - all breeds - first lactations | 78 |
| 3.5 - Complete lactations - first lactations per local area and breed | 80 |
| 3.6 - 305-d lactations - all breeds - all lactations | 90 |
| 3.7 - 305-d lactations - all lactations per local area and breed | 92 |
| 3.8 - 305-d lactations - all breeds - first lactations | 105 |
| 3.9 - 305-d lactations - first lactations per local area and breed | 107 |
| IV - SOMATIC CELLS COUNT RESULTS PER LOCAL AREA | 117 |

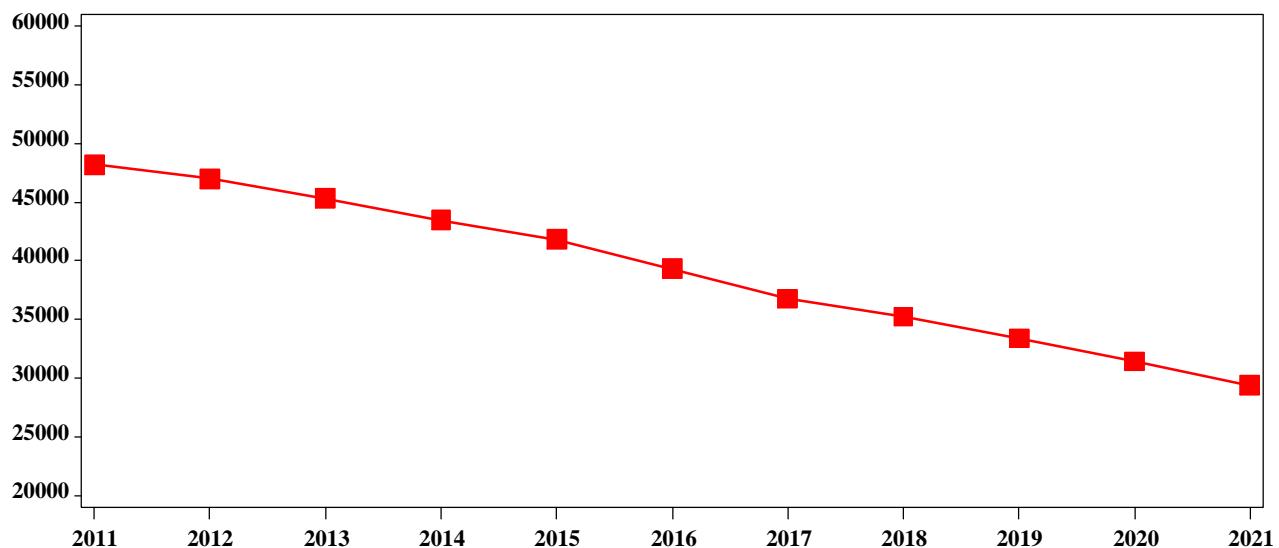

I - NATIONAL RESULTS

1.1 - Total milk recorded population

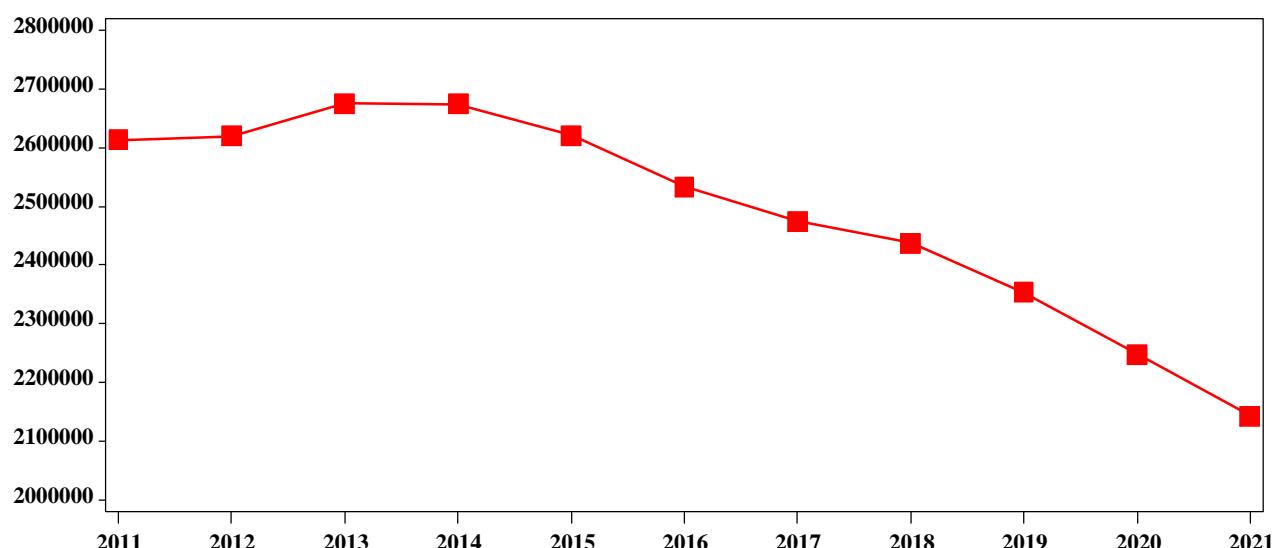

1.1.1 - Total number of active herds on December, 31st, 2021*

29,382 herds

1.1.2 - Total number of active cows on December, 31st, 2021*

2,142,313 cows

For information about how the number of "active herds" and "active cows" is calculated, refer to « Data processing » paragraph (cf. page 4).

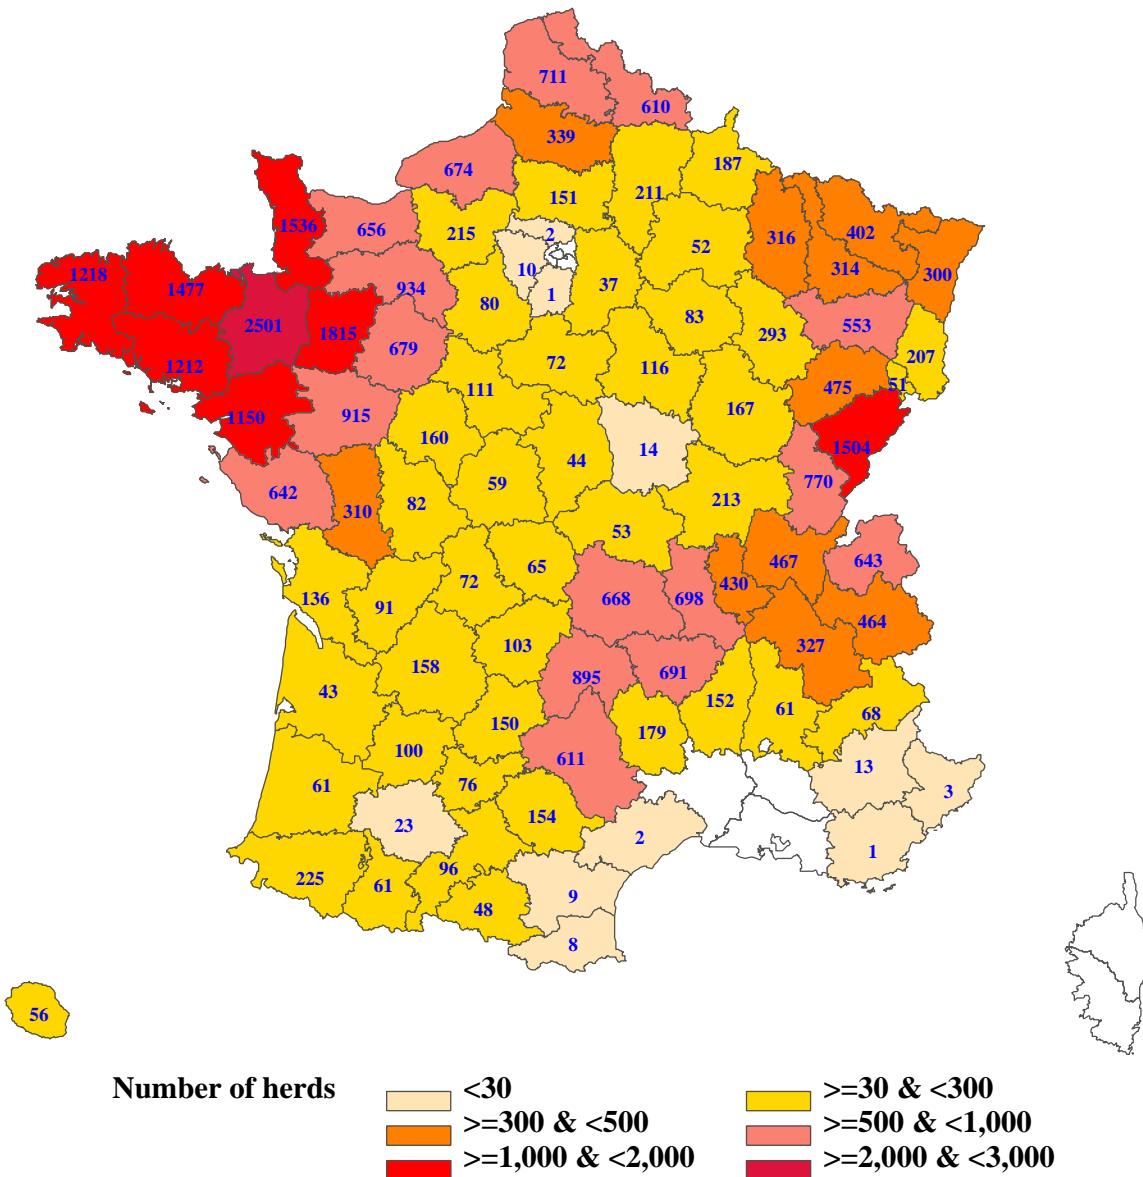

1.1.3 - Terminated lactations

These results take into account the last terminated lactation (qualified or not) of each animal (refer to paragraph « Data processing » on page 4 for further details).

1.1.3.1 - Total number of herds with terminated lactations

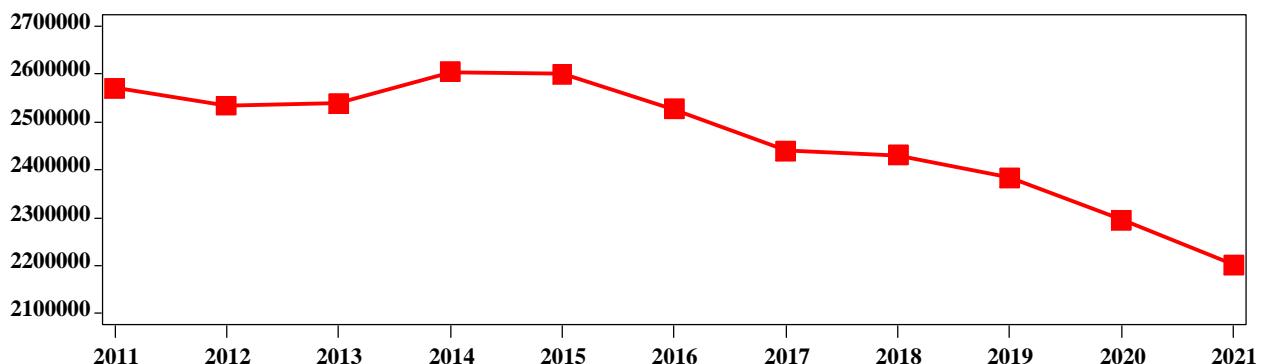

32,792 herds

Herd distribution with terminated lactations per local area (= French “département”)

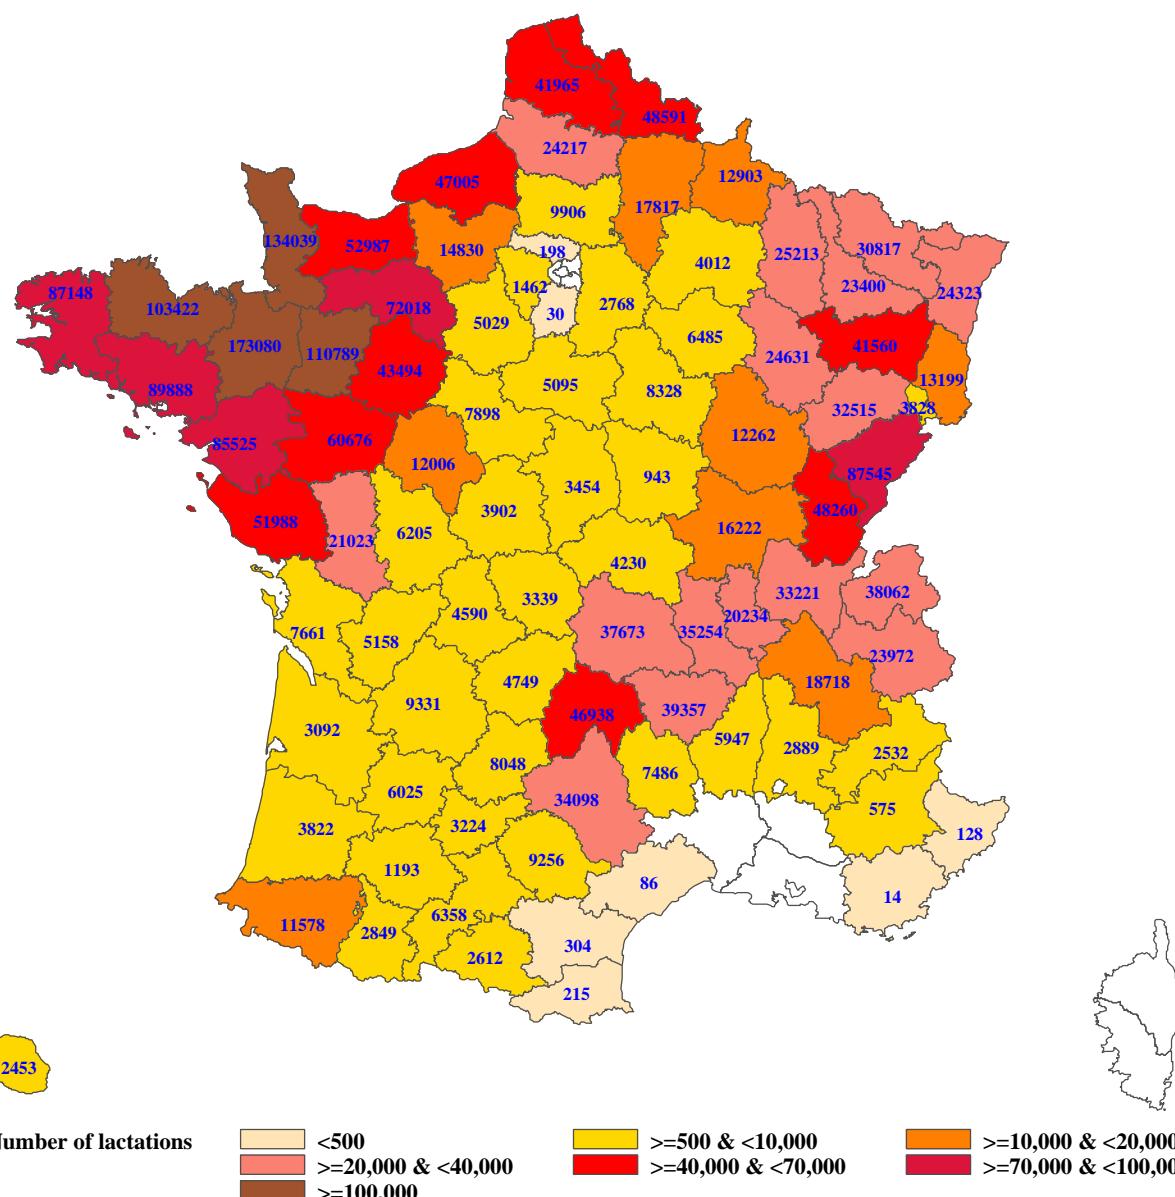

1.1.3.2 - Total number of terminated lactations

2,202,172 lactations

Distribution of terminated lactations per local area

1.2 - Qualified lactations

This table shows the distribution of qualified lactations according to the year of calving and of drying off.

| Year of calving | Year of drying off | | | | | | | | Overall total | |
|-----------------|--------------------|-----|--------|-----|---------|------|-----------|------|---------------|------|
| | 2018 | | 2019 | | 2020 | | 2021 | | | |
| | Nb | % | Nb | % | Nb | % | Nb | % | Nb | % |
| 2018 | 5,057 | 0.2 | 46,436 | 2.2 | 8,724 | 0.4 | 4,700 | 0.2 | 64,917 | 3.1 |
| 2019 | | | 4,693 | 0.2 | 166,766 | 8.1 | 125,164 | 6.1 | 296,623 | 14.4 |
| 2020 | | | | | 52,157 | 2.5 | 1,422,308 | 68.9 | 1,474,465 | 71.4 |
| 2021 | | | | | | | 228,126 | 11.1 | 228,126 | 11.1 |
| Overall total | 5,057 | 0.2 | 51,129 | 2.5 | 227,647 | 11.0 | 1,780,298 | 86.2 | 2,064,131 | 100 |

For example: 1,422,308 qualified lactations (that is to say 68.9 % of the overall total) match the following criteria: a calving date in 2020 a drying off date in 2021.

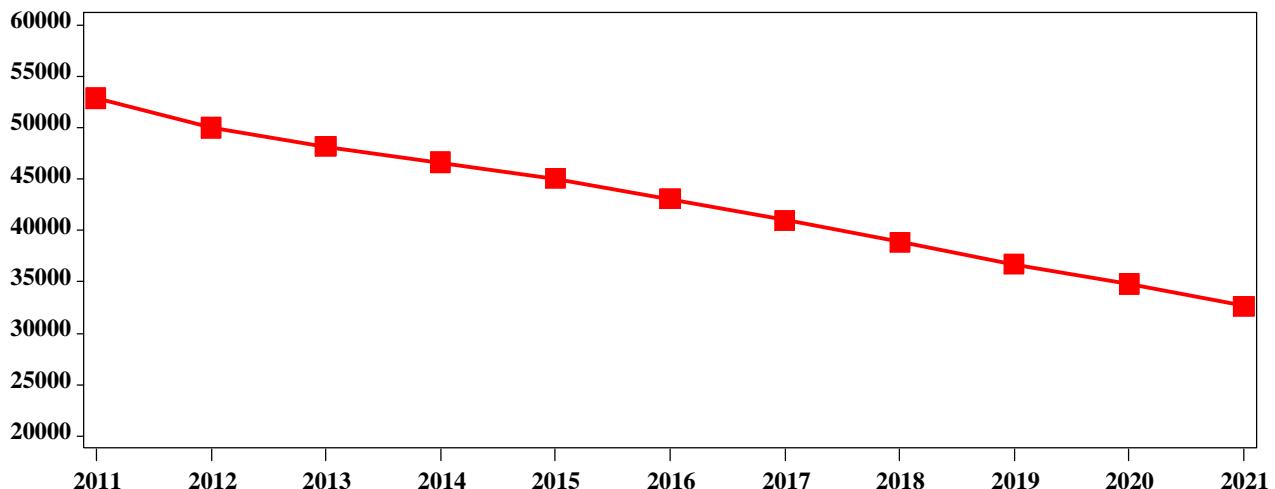

1.2.1 - Complete lactations

These results take in account all the qualified lactations, with no delete or no kind of adjustment, whatever their duration.

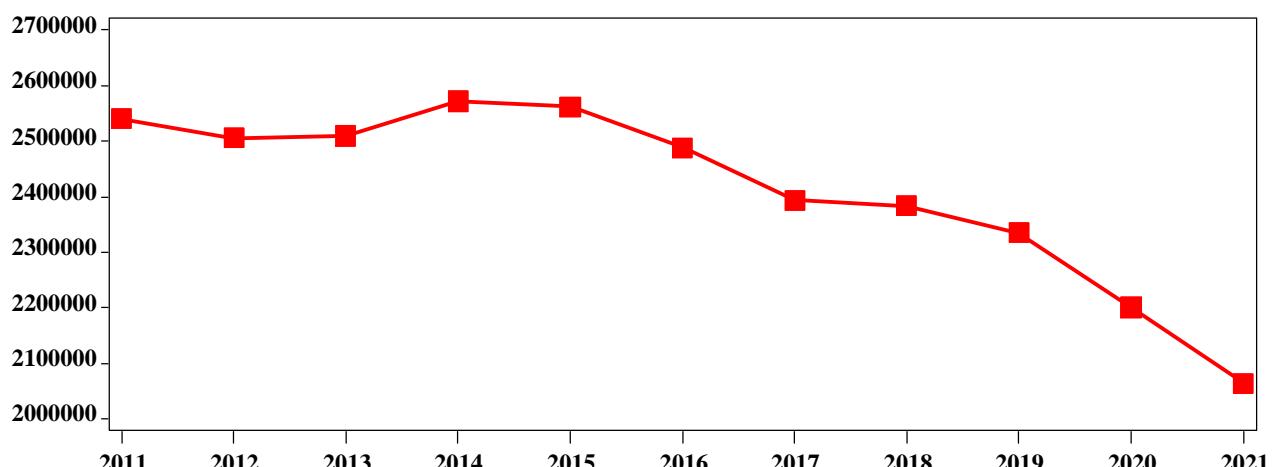

1.2.1.1 - Total number of herds which provided complete lactation results

32,669 herds

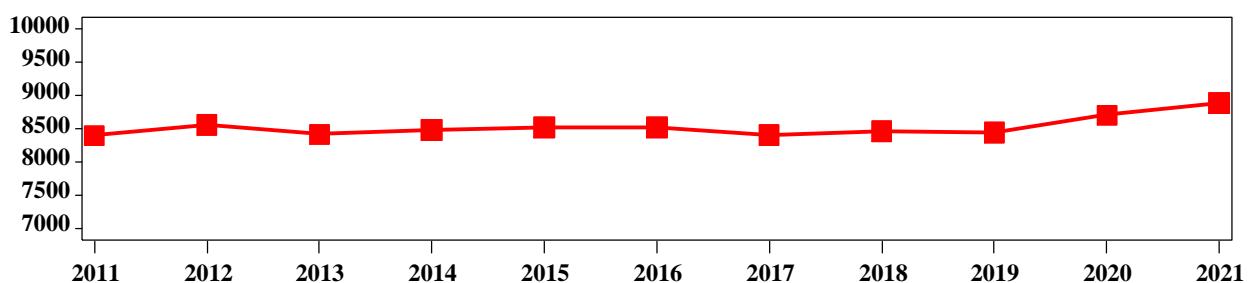

1.2.1.2 - Total number of complete lactations

2,064,131 lactations

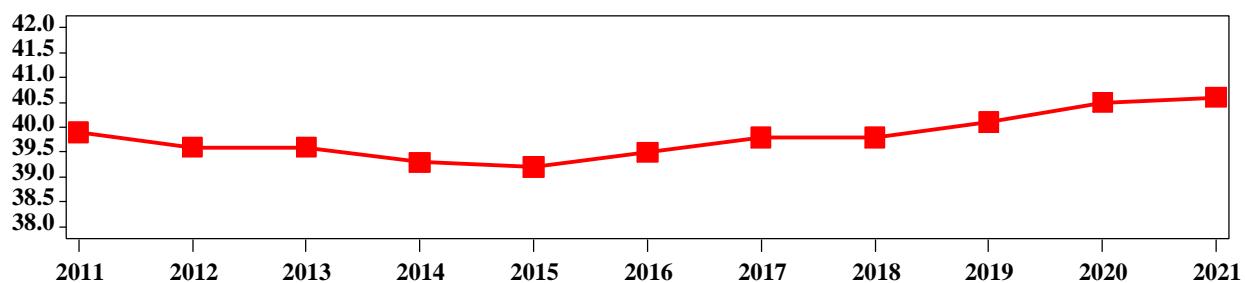

| | 2021 | Variation 2021/2020 | 2020 |
|----------------------------|------------------|----------------------------|-------------|
| Number of results | 2,064,131 | -136,521 | 2,200,652 |
| Lactation duration | <i>days</i> | 344 | 5 |
| Milk yield | <i>kg</i> | 8,887 | 180 |
| Fat content | <i>kg</i> | 361 | 8 |
| Fat %o | <i>g/kg</i> | 40.6 | 0.1 |
| True protein content | <i>kg</i> | 292 | 6 |
| True protein | <i>g/kg</i> | 32.9 | 0.1 |
| Protein %o | <i>g/kg</i> | 34.6 | 0.1 |
| True protein + fat content | <i>kg</i> | 653 | 15 |
| True protein + fat %o | <i>g/kg</i> | 73.5 | 0.2 |

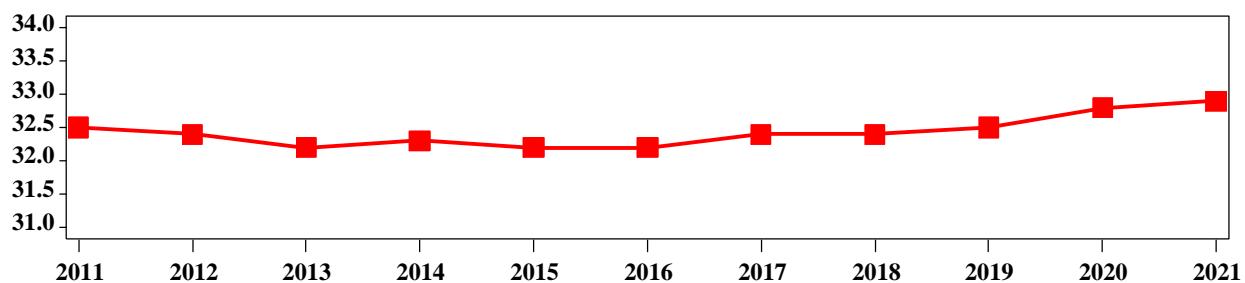

Milk yield – complete lactations - kg

Fat %o – complete lactations - g/kg

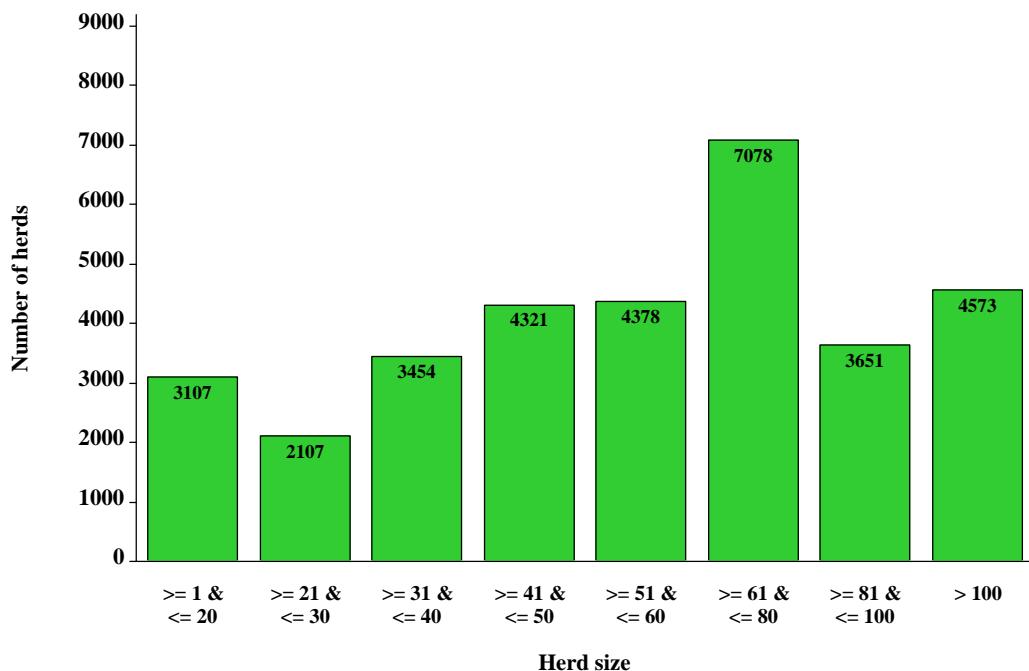

True protein %o – complete lactations - g/kg

1.2.2 - Herds distribution per herd size

| Herd size | Herds | | Lactation results | | Milk yield | Fat % | True protein % | Duration |
|----------------------|---------------|------------|-------------------|------------|--------------|-------------|----------------|------------|
| | Nb | % | Nb | % | kg | g/kg | g/kg | |

Milk yield per calving month – kg

1.2.5 - 305-d lactations (= reference lactations)

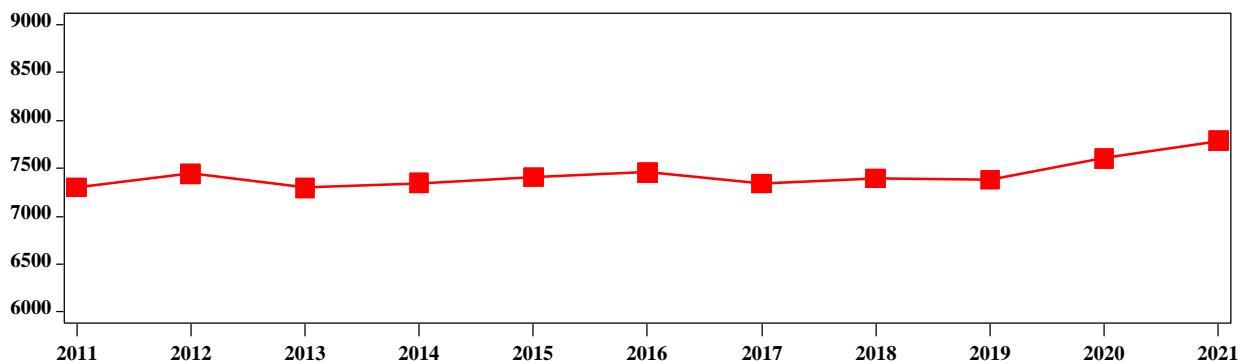

Two scenarios are possible for calculating the reference lactations:

1. **The complete lactation exceeds the reference period (305 days).** In this case, the results of the reference are calculated by interpolation, using the Fleischmann method.
2. **Complete lactation does not exceed the reference period.** In this case, the results of the reference lactation are those of the complete lactation.

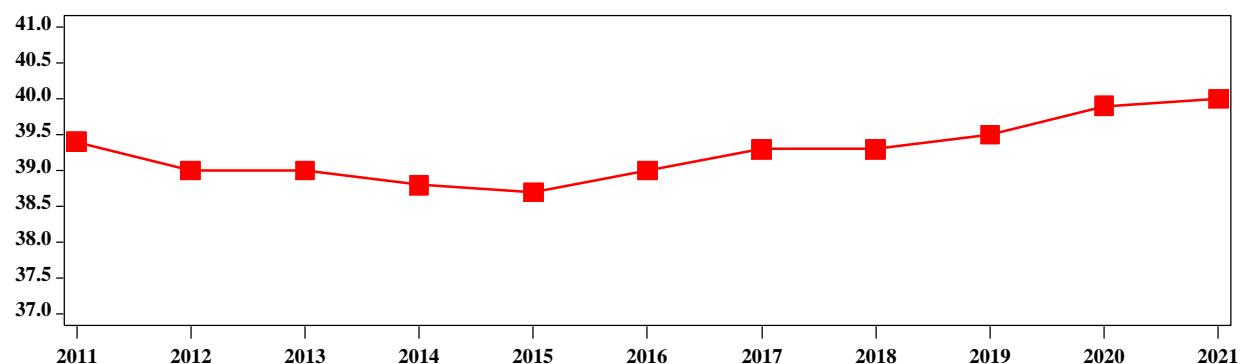

| | 2021 | 2020 |
|----------------------------|-------------|--------------|
| Milk yield | kg | 7,786 |
| Fat content | kg | 312 |
| Fat %o | g/kg | 40.0 |
| True protein content | kg | 252 |
| True protein %o | g/kg | 32.3 |
| Fat + true protein content | kg | 563 |
| Fat + true protein %o | g/kg | 72.4 |

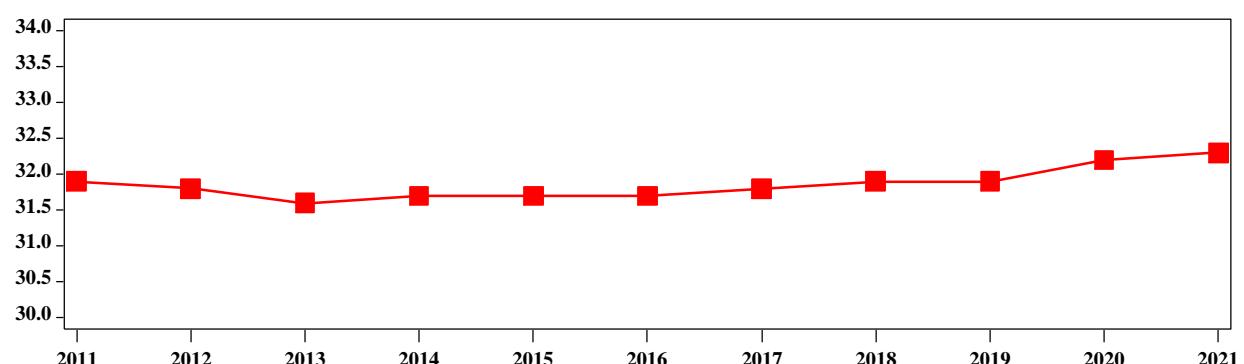

Milk yield - 305-d lactations - kg

Fat %o - 305-d lactations - g/kg

True protein %o - 305-d lactations - g/kg

1.2.6 - Adjusted lactations

Steps taken to obtain these results:

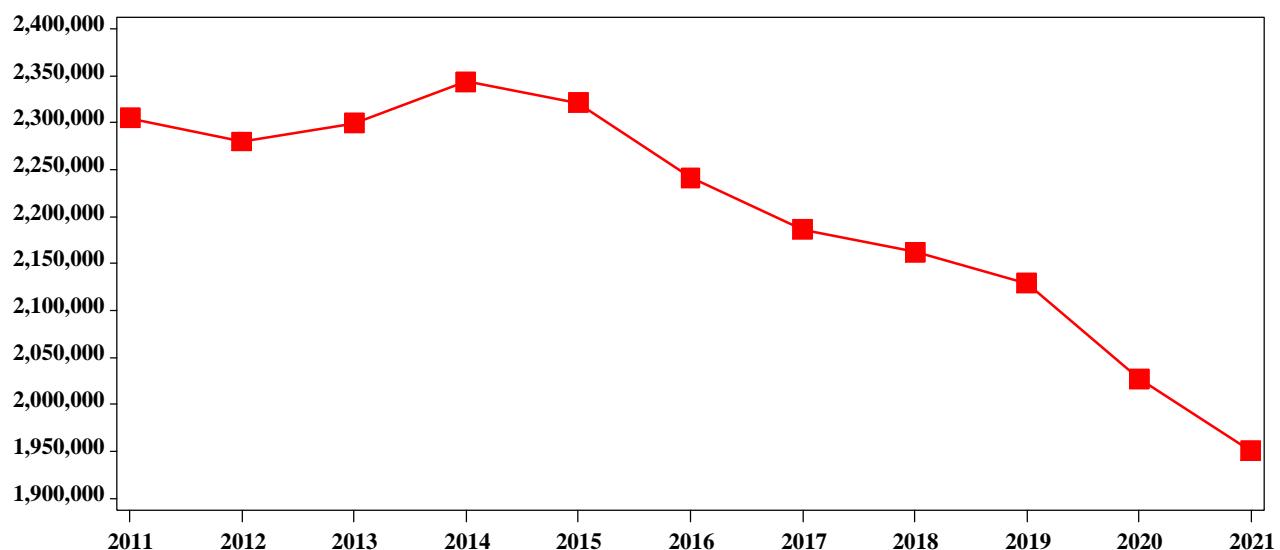

Firstly, exclusion of the lactations with duration lower than 200 days (representing 113,786 lactations, that is to say 5.5 % of the total number).

Secondly, the remaining lactations are adjusted to adult level by multiplying the results for parity 1 to 3 by the following coefficients defined by the French National Institute for Agricultural Research (INRA):

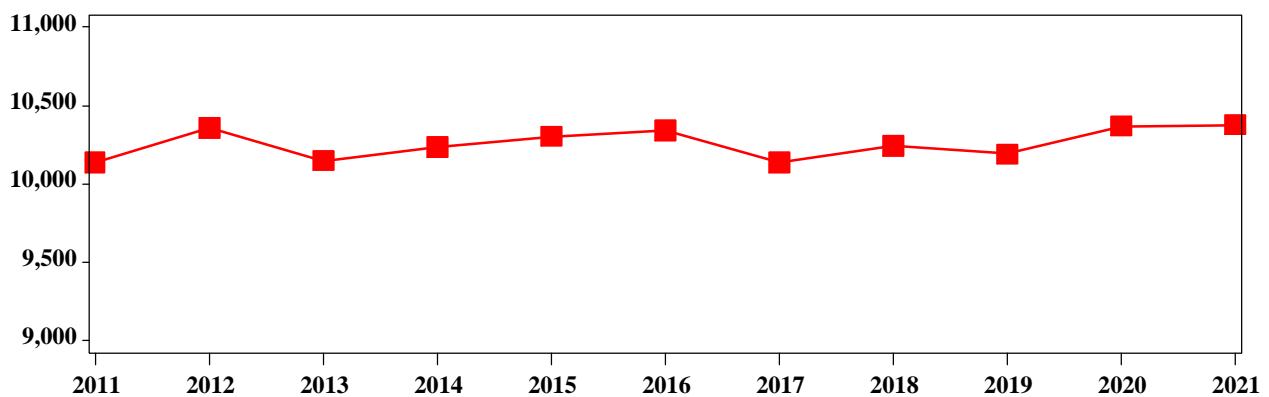

1.30 for 1st lactations ; 1.12 for 2nd lactations ; 1.03 for 3rd lactations ; 1.00 for lactations 4 and over.

| | % | 94% | 92% |
| Lactation duration | days | 355 | 357 |
| Milk yield | kg | 10,378 | 10,370 |
| Fat content | kg | 422 | 420 |
| Fat % | g/kg | 40.7 | 40.5 |
| True protein content | kg | 342 | 341 |
| True protein % | g/kg | 32.9 | 32.9 |
| Fat + true protein content | kg | 764 | 761 |
| Fat + true protein % | g/kg | 73.6 | 73.4 |

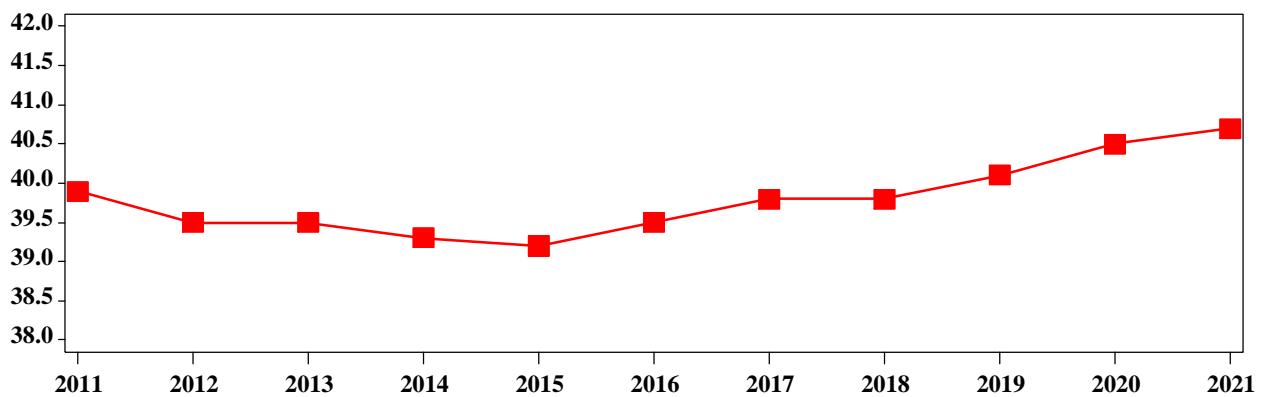

Number of adjusted lactations

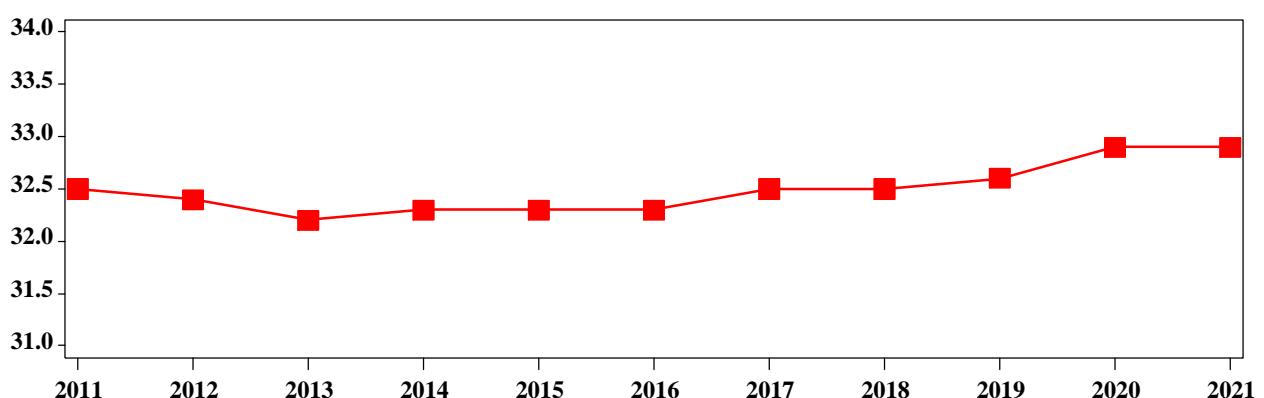

Milk yield - adjusted lactations - kg

Fat %o - adjusted lactations - g/kg

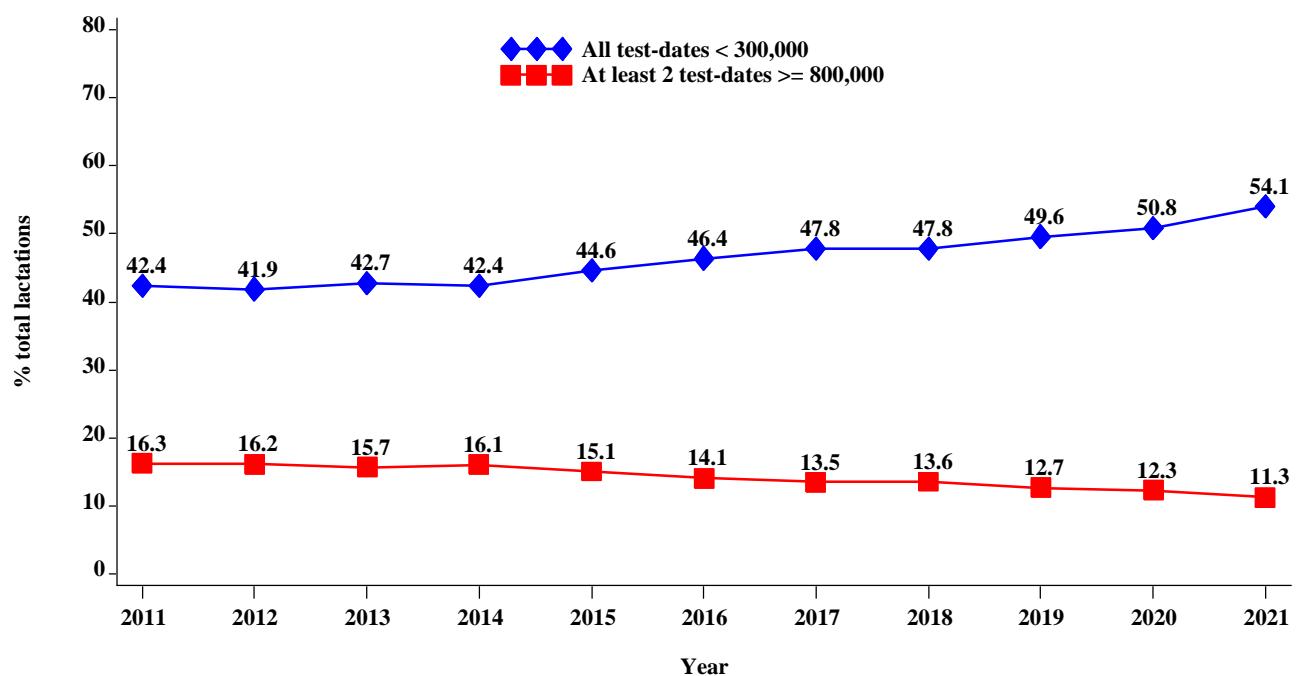

True protein %o - adjusted lactations - g/kg

1.2.7 - Evolution of the individual cell count results

| Year | At least 2 test-dates with cell count >= 800,000 | | Lactations with All the test-dates with cell count < 300,000 | | Intermediate somatic cell counts | | Overall total |
|------|--|------|--|------|----------------------------------|------|---------------|
| | Nb | % | Nb | % | Nb | % | |
| 2011 | 413,276 | 16.3 | 1,077,970 | 42.4 | 1,048,912 | 41.3 | 2,540,158 |
| 2012 | 405,313 | 16.2 | 1,049,558 | 41.9 | 1,051,072 | 41.9 | 2,505,943 |
| 2013 | 393,158 | 15.7 | 1,070,375 | 42.7 | 1,046,094 | 41.7 | 2,509,627 |
| 2014 | 415,073 | 16.1 | 1,089,574 | 42.4 | 1,067,377 | 41.5 | 2,572,024 |
| 2015 | 387,179 | 15.1 | 1,143,536 | 44.6 | 1,031,468 | 40.3 | 2,562,183 |
| 2016 | 351,106 | 14.1 | 1,154,341 | 46.4 | 982,703 | 39.5 | 2,488,150 |
| 2017 | 322,706 | 13.5 | 1,143,090 | 47.8 | 927,988 | 38.8 | 2,393,784 |
| 2018 | 325,037 | 13.6 | 1,140,258 | 47.8 | 918,244 | 38.5 | 2,383,539 |
| 2019 | 296,944 | 12.7 | 1,157,271 | 49.6 | 880,704 | 37.7 | 2,334,919 |
| 2020 | 271,132 | 12.3 | 1,117,590 | 50.8 | 811,930 | 36.9 | 2,200,652 |
| 2021 | 232,486 | 11.3 | 1,117,110 | 54.1 | 714,535 | 34.6 | 2,064,131 |

Compared to 2020, the percentage of lactations with at least 2 test-dates >800,000 cells decreases of -1.0% in 2021, whereas the percentage of lactations with all test-dates <300,000 cells increases of 3.3%.

| | Overall Total | 2,064,131 | 8,793 | 352 | 40.0 | 284 | 32.3 | 34.0 |

*Protein % = Nitrogen %

Comment:

In order to adjust to adult level, a multiplying factor depending on the parity is applied to milk and contents:

- If the parity is 1, the multiplying factor is 1.30,
- If the parity is 2, the multiplying factor is 1.12,
- If the parity is 3, the multiplying factor is 1.03,
- If the parity is 4 and over, the multiplying factor is 1.

2.5 - Number of pure-bred herds per breed

| Breed | Number of herds | Number of lactations | Pure-bred herds ¹ | | Lactations of pure-bred herds ¹ | |
|-----------------------|-----------------|----------------------|------------------------------|------|--|------|
| | | | Nb | % | Nb | % |
| Prim'Holstein | 24,834 | 1,323,367 | 17,836 | 71.8 | 1,135,179 | 85.8 |

Detailed results per breed

Breed BRETONNE PIE NOIRE (French breed code: 29)

Complete lactations results per parity

| Parity | Number of qualified lactations | Calving age months | Lactation duration days | Milk yield kg | Fat content kg | Fat %o g/kg | True protein content kg | True protein %o g/kg | Fat + true protein content kg | Fat + true protein %o g/kg | Calving interval days |
|----------------------|--------------------------------|--------------------|-------------------------|---------------|----------------|-------------|-------------------------|----------------------|-------------------------------|----------------------------|-----------------------|
| 1st lactation | 65 | 30 | 253 | 1,974 | 89 | 44.9 | 66 | 33.4 | 154 | 78.3 | |
| 2nd lactation | 68 | 44 | 252 | 2,244 | 96 | 42.9 | 75 | 33.6 | 172 | 76.5 | 404 |
| 3rd lactation | 26 | 57 | 247 | 2,362 | 103 | 43.4 | 78 | 33.1 | 181 | 76.5 | 395 |
| 4th lactation | 15 | 70 | 272 | 2,958 | 137 | 46.2 | 96 | 32.5 | 233 | 78.7 | 381 |
| 5th lactation | 17 | 82 | 262 | 3,042 | 133 | 43.8 | 100 | 32.9 | 233 | 76.7 | 378 |
| 6th lactation | 11 | 94 | 278 | 2,614 | 119 | 45.6 | 90 | 34.2 | 209 | 79.8 | 370 |
| 7th lactation | 10 | 110 | 344 | 3,432 | 154 | 44.7 | 116 | 33.7 | 269 | 78.4 | 478 |
| Lactation 8 and over | 10 | 134 | 269 | 3,094 | 134 | 43.4 | 97 | 31.3 | 231 | 74.8 | 395 |
| All lactations | 222 | | 260 | 2,398 | 106 | 44.1 | 80 | 33.2 | 185 | 77.3 | 399 |

III - RESULTS PER LOCAL AREA (= French “département”)

Data processing

The French Livestock Institute calculated and processed goat milk recording annual results from data extracted from the goat national database (extraction performed on 4 March 2022).

In paragraph 1.1.1, the number of « active » goats refers to goats that belong to a herd with active MR contract and for which at least one milk record has been registered throughout the year.

In paragraph 1.1.2, the number of « active » herds refers to herds with at least one active goat taken into account over the year 2021.

One lactation per « active » goat, the last terminated one, is taken into account in the process (under condition of kidding date after January 1st, 2018). Because of the application of these conditions, the results presented in this report do not include primiparous goats having their lactation still on-going.

These selected lactations can be qualified or not.

Non-qualified lactations are taken into account only for calculation of the number of terminated lactations (see paragraph 1.2 and column « Terminated lactations » of table 1.4).

Calculated results (from the paragraph 1.3) refer only to **qualified lactations**.

The distribution of these lactations per year of kidding and of drying off is presented in the table 1.3.1.

In table 3.1.3, average age at 1st kidding is calculated for a breed only when the total of lactations exceeds 40 at national level.

In table 5.3, the milk recording protocol applied for a given lactation is in accordance with the current French guidelines for goat milk recording: « *when milk recording protocol changes for a herd, for example from A to AZ, CZ or AT, the on-going lactations are calculated and qualified according to the protocol which gives less accurate information (AT < CZ < AZ < A)* ».

Herds taken into account are those for which lactation results are available, in accordance with the rules previously given.

Trends for 2021

The number of qualified lactations is slightly increasing in 2021 to reach 235,778 lactations (+ 2,863 lactations, +1.2 %). At the same time, the number of flocks is slightly decreasing to reach 1,457 flocks (-1.1%).

The two main breeds (Alpine and Saanen) represent henceforth 96.5% of the total of qualified lactations.

The proportion of primiparous dairy goats is slightly increasing and reaches 36 % (+0.5%), confirming the trend observed since 2018 (+0.8% in 2019, +1.7% in 2020).

The milk yield reach 992 Kg per lactation (+3Kg). The lactation duration is stable at 321 days, confirming the increase observed for a few years (298 days in 2014). Meanwhile true-protein and fat rates are still increasing and reaches respectively 33.6 g/Kg (+0.2) and 37.7 g/Kg (+0.1).

TABLE OF CONTENTS

| | |
|---|-----------|
| I - NATIONAL RESULTS | 5 |
| 1.1 - Overall milk recorded population | 5 |
| 1.1.1 - <i>Total number of active herds in 2021*</i> | 5 |
| 1.1.2 - <i>Total number of active goats in 2021*</i> | 5 |
| 1.2 - Terminated lactations | 6 |
| 1.3 - Qualified lactations | 8 |
| 1.3.1 - <i>Distribution of qualified lactations per year of calving and of drying off</i> | 8 |
| 1.3.2 - <i>Results of the campaign</i> | 8 |
| 1.4 - Reminder of previous campaigns | 8 |
| II - RESULTS ACCORDING TO VARIATION FACTORS | 9 |
| 2.1 - Results per parity | 9 |
| 2.2 - Results according to herd size | 9 |
| 2.3 - Results according to the month of kidding | 10 |
| 2.3.1 - <i>First lactations</i> | 10 |
| 2.3.2 - <i>Lactations 2 and over</i> | 10 |
| III - RESULTS PER BREED | 11 |
| 3.1 - Overall results | 11 |
| 3.1.1 - <i>Complete lactations</i> | 11 |
| 3.1.2 - <i>Reference lactations</i> | 11 |
| 3.1.3 - <i>Average age at first kidding</i> | 12 |
| 3.2 - Detailed results per breed | 13 |
| IV - RESULTS PER REGION | 22 |
| 4.1 - Detailed results | 22 |
| 4.2 - Kidding distribution per month | 22 |
| V - RESULTS PER LOCAL AREA (= FRENCH « DÉPARTEMENT ») | 23 |
| 5.1 - Geographical distributions | 23 |
| 5.2 - Detail results per local area | 24 |
| 5.3 - Distribution of milk recording protocols per local area | 26 |
| 5.4 - Lactations (complete and reference) per breed and per local area | 28 |

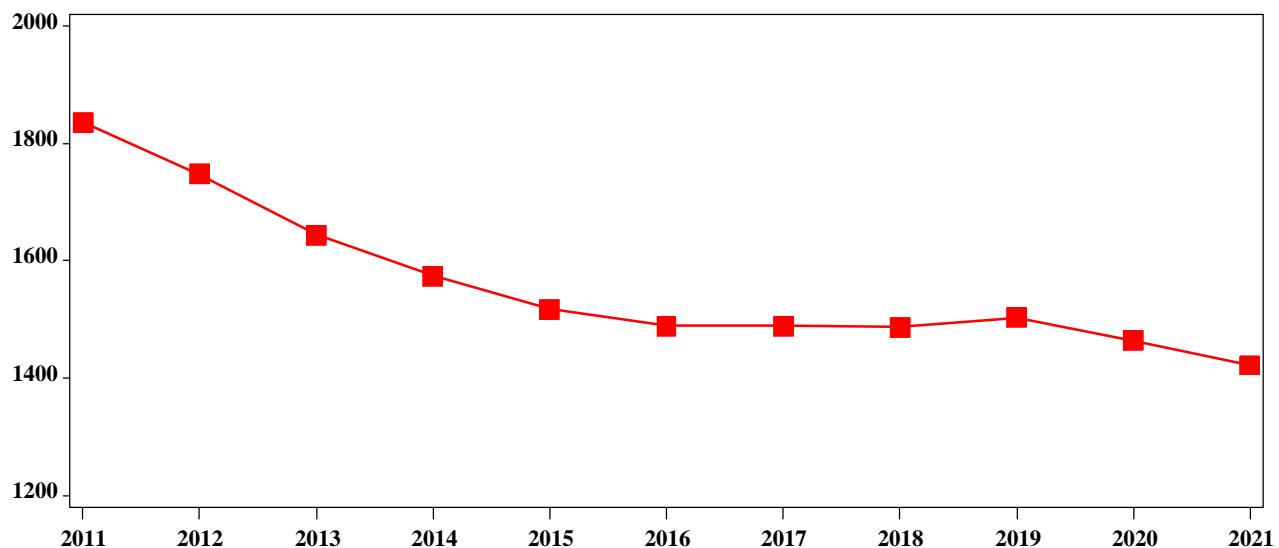

I - NATIONAL RESULTS

1.1 - Overall milk recorded population

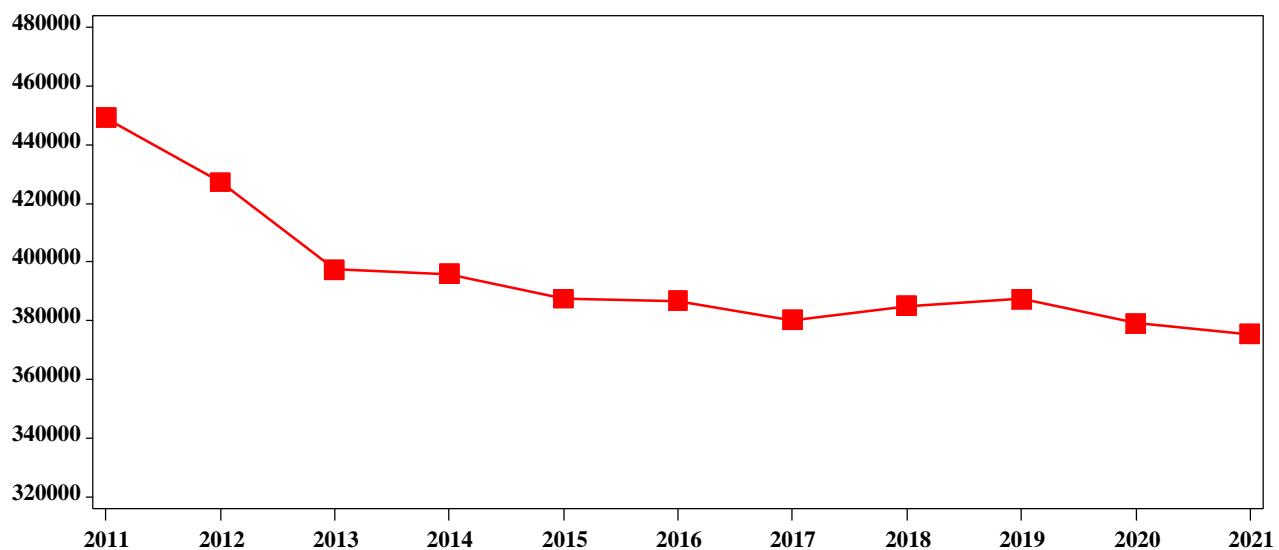

1.1.1 - Total number of active herds in 2021*

1,422 herds

1.1.2 - Total number of active goats in 2021*

375,492 goats

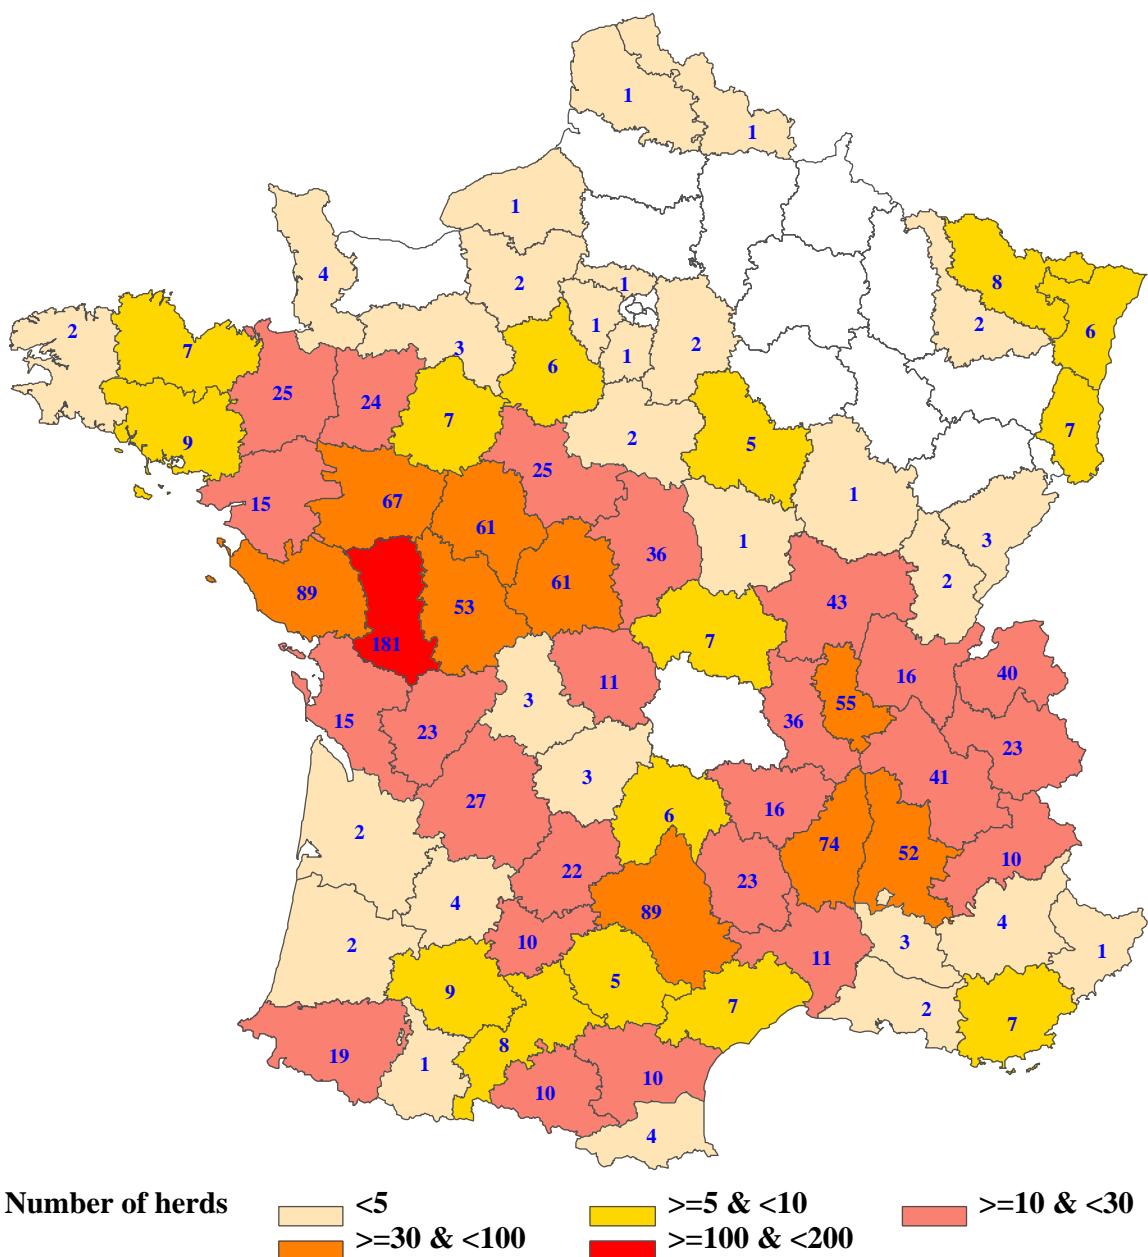

* For information about how the number of « active herds » and « active goats » is calculated, refer to « Data processing » paragraph (cf. page 2).

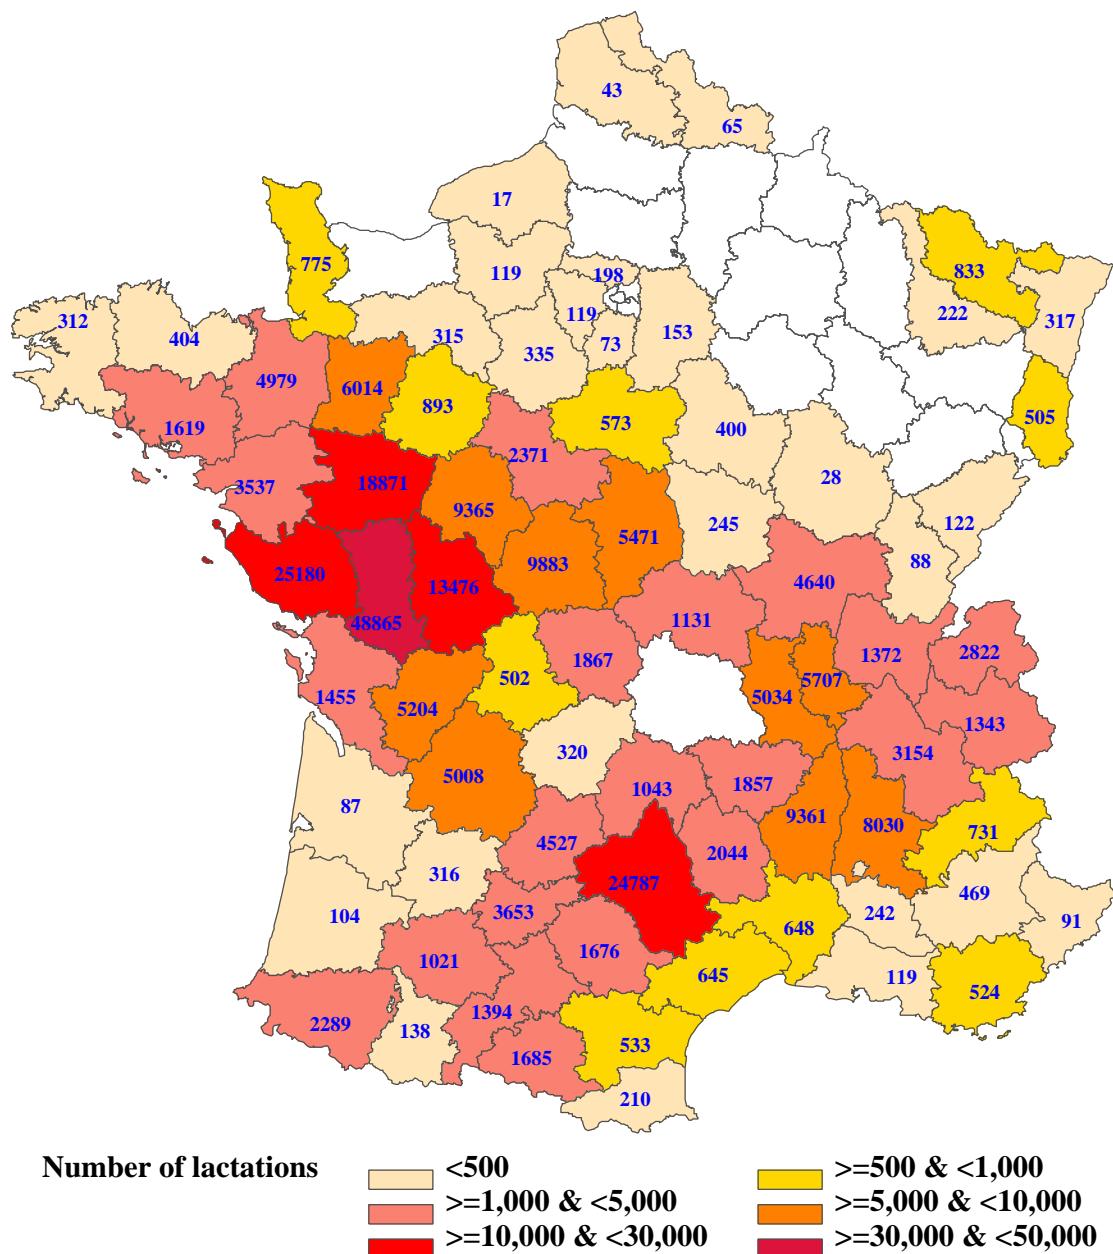

1.2 - Terminated lactations

| | |
|---|---------|
| Total number of herds with terminated lactations | 1,476 |
| Total number of terminated lactations | 264,568 |
| Average number of terminated lactations per herd | 179.2 |
| Total number of herds with qualified lactations | 1,457 |
| Total number of herds with qualified lactations | 235,778 |

Distribution of herds (with terminated lactations) per local area (= French « département »)

Distribution of terminated lactations per local area

1.3 - Qualified Lactations

1.3.1 - Distribution of qualified lactations per year of kidding and of drying off

| Year of kidding | Year of drying off | | | | | | | | Total | |
|-----------------|--------------------|-----|-------|-----|--------|------|---------|------|---------|------|
| | 2018 | | 2019 | | 2020 | | 2021 | | | |
| | Nb | % | Nb | % | Nb | % | Nb | % | Nb | % |
| 2018 | 221 | 0.1 | 621 | 0.3 | 1,591 | 0.7 | 980 | 0.4 | 3,413 | 1.4 |
| 2019 | | | 1,784 | 0.8 | 18,756 | 8.0 | 6,162 | 2.6 | 26,702 | 11.3 |
| 2020 | | | | | 26,873 | 11.4 | 72,673 | 30.8 | 99,546 | 42.2 |
| 2021 | | | | | | | 106,117 | 45.0 | 106,117 | 45.0 |
| Total | 221 | 0.1 | 2,405 | 1.0 | 47,220 | 20.0 | 185,932 | 78.9 | 235,778 | 100 |

For example: 106,117 qualified lactations (that is to say 45.0 % of the overall total) match the following criteria: a calving date and a drying off date in 2021.

1.3.2 - Results of the campaign

| Parity | First lactations | Lactations 2 and over | Overall total |
|-----------------------------|------------------|-----------------------|---------------|
| Number of lactations kg | 84,775 | 151,003 | 235,778 |
| Lactation duration days | 334 | 313 | 321 |
| Milk yield kg | 963 | 1,008 | 992 |
| True protein content kg | 32.4 | 33.8 | 33.3 |
| True protein %o g/kg | 33.7 | 33.5 | 33.6 |
| Fat content kg | 37.2 | 37.5 | 37.4 |
| Fat %o g/kg | 38.6 | 37.2 | 37.7 |

1.4 - Reminder of previous campaigns

| Year | Terminated lactations | Qualified lactations | Lactation duration days | Milk yield g/kg | True protein content kg | True protein %o g/kg | Fat content kg | Fat %o g/kg |
|------|-----------------------|----------------------|-------------------------|-----------------|-------------------------|----------------------|----------------|-------------|
| 2012 | 342,698 | 299,709 | 303 | 946 | 30.6 | 32.4 | 34.7 | 36.7 |
| 2013 | 316,119 | 282,516 | 299 | 907 | 29.5 | 32.6 | 33.5 | 36.9 |
| 2014 | 306,246 | 274,541 | 298 | 910 | 29.8 | 32.7 | 33.4 | 36.7 |
| 2015 | 297,973 | 262,854 | 301 | 925 | 30.3 | 32.7 | 33.9 | 36.7 |
| 2016 | 298,734 | 264,040 | 303 | 949 | 31.2 | 32.9 | 35.1 | 37.0 |
| 2017 | 280,306 | 250,121 | 312 | 953 | 31.4 | 33.0 | 35.3 | 37.0 |
| 2018 | 283,232 | 256,095 | 319 | 964 | 31.8 | 33.0 | 35.8 | 37.1 |
| 2019 | 274,956 | 249,579 | 318 | 963 | 32.0 | 33.2 | 36.1 | 37.5 |
| 2020 | 270,784 | 232,915 | 321 | 989 | 33.0 | 33.4 | 37.1 | 37.6 |
| 2021 | 264,568 | 235,778 | 321 | 992 | 33.3 | 33.6 | 37.4 | 37.7 |

II - RESULTS ACCORDING TO VARIATION FACTORS

2.1 - Results per parity

| Parity | Lactations | | Lactation duration | Milk yield | True protein % | Fat % |
|----------------------|----------------|------------|--------------------|------------|----------------|-------------|
| | Nb | % | days | kg | g/kg | g/kg |
| 1 | 84,775 | 36.0 | 334 | 963 | 33.7 | 38.6 |
| 2 | 62,567 | 26.5 | 321 | 1,048 | 33.8 | 37.6 |
| 3 | 40,051 | 17.0 | 313 | 1,031 | 33.6 | 37.1 |

| Overall total | 151,003 | 100 | 313 | 1,008 | 33.8 | 33.5 | 37.5 | 37.2 |

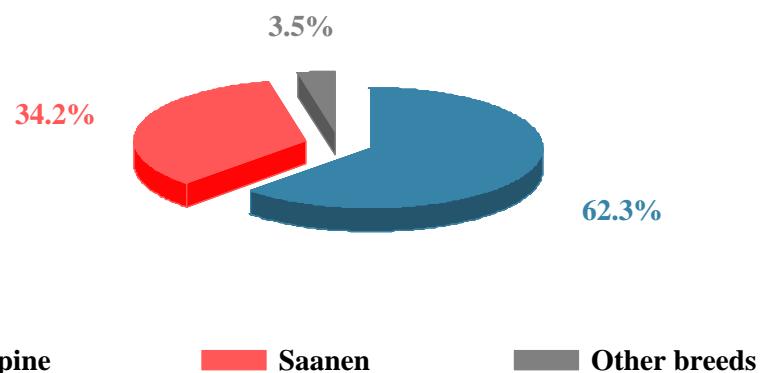

III - RESULTS PER BREED

3.1 - Overall results

3.1.1 - Complete lactations

| Breed | Number of lactations | Lactation duration days | Milk yield kg | True protein content kg | True protein % g/kg | Fat content kg | Fat % g/kg | Kidding interval days | Average lactation rank |
|----------------------|----------------------|-------------------------|---------------|-------------------------|---------------------|----------------|-------------|-----------------------|------------------------|
| Alpine | 146,854 | 317 | 978 | 33.2 | 34.0 | 37.4 | 38.3 | 395 | 2.4 |
| Saanen | 80,750 | 329 | 1,034 | 34.0 | 32.9 | 38.0 | 36.7 | 404 | 2.4 |
| Crossbred | 7,089 | 315 | 878 | 29.3 | 33.4 | 32.9 | 37.5 | 402 | 2.5 |
| Poitevine | 351 | 265 | 530 | 16.2 | 30.5 | 18.6 | 35.1 | 386 | 3.9 |
| Chèvre des Savoie | 307 | 248 | 475 | 13.5 | 28.5 | 16.3 | 34.2 | 361 | 3.2 |
| Massif Central | 50 | 273 | 463 | 13.2 | 28.5 | 17.0 | 36.8 | 397 | 2.5 |
| Pyrénéenne | 43 | 208 | 209 | 6.0 | 28.9 | 7.6 | 36.7 | 372 | 3.9 |
| Other breeds | 334 | 264 | 539 | 16.9 | 31.4 | 20.1 | 37.2 | 370 | 2.7 |
| Overall total | 235,778 | 321 | 992 | 33.3 | 33.6 | 37.4 | 37.7 | 398 | 2.4 |

3.1.2 - Reference lactations

Two scenarios are possible for calculating the reference lactations:

1. 1. The complete lactation exceeds the reference period (example: 250 days for the Alpine breed).
In this case, the results of the reference lactation are calculated by interpolation, using the Fleischmann method.
2. 2. The complete lactation does not exceed the reference period.
In that case, the results of the reference lactation and the complete lactation are identical.

| Breed | Number of lactations | Reference duration days | Milk yield kg | True protein % g/kg | Fat % g/kg |
|----------------------|----------------------|-------------------------|---------------|---------------------|-------------|
| Alpine | 146,854 | 250 | 822 | 33.4 | 37.7 |
| Saanen | 80,750 | 250 | 818 | 32.4 | 36.3 |
| Crossbred | 7,089 | 250 | 718 | 32.8 | 37.0 |
| Poitevine | 351 | 230 | 492 | 30.1 | 34.8 |
| Chèvre des Savoie | 307 | 150 | 333 | 28.1 | 33.9 |
| Massif Central | 50 | 150 | 323 | 28.0 | 37.5 |
| Pyrénéenne | 43 | 170 | 175 | 28.4 | 36.3 |
| Other breeds | 334 | 150 | 378 | 30.6 | 36.9 |
| Overall total | 235,778 | | 816 | 33.0 | 37.2 |

Note: comparing the results obtained by the different breeds should be avoided as long as a specific reference lactation duration is defined for each breed.

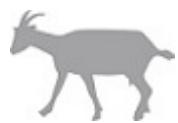

3.1.3 - Average age at 1st kidding

NB: This criterion is calculated only when the date of birth of a goat is known.

| Breed | Number of lactations | Average age at 1st kidding days |
|-------------------|----------------------|------------------------------------|
| Alpine | 50,145 | 393 |
| Saanen | 28,128 | 388 |
| Crossbred | 2,232 | 406 |
| Chèvre des Savoie | 70 | 468 |
| Poitevine | 51 | 521 |
| Pyrénéenne | 3 | NS* |
| Massif Central | 1 | NS* |
| Other breeds | 91 | 453 |

*NS : Not significant (cf. paragraph « Data processing » page 2 for details).

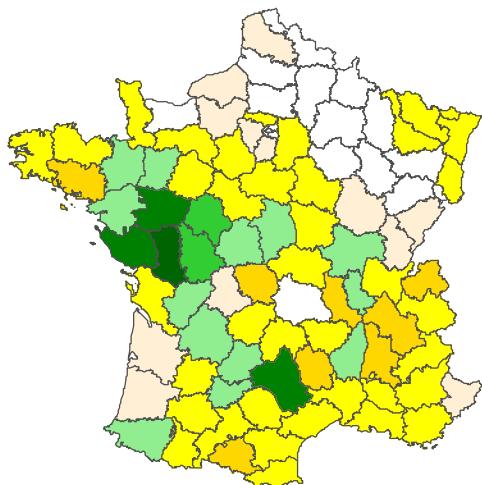

3.2 - Results per breed

Breed ALPINE (French breed code: 13)

Geographical distribution of qualified lactations of Alpine breed

- >=2 & <100
- >=100 & <1000

Introduction

The research and development process in genetic improvement of dairy sheep successively dealt with productivity of ewes and herds (during the 70s and 80s), chemical milk composition and its suitability for cheese production (during the 80s and 90s), finally functional abilities such as resistance to subclinical mastitis and udder morphology (2000 decade). These functional characteristics enable the animals' functional longevity to be improved. This improvement matches with their ability to postpone their culling for other reasons than those linked with their milk yield level. In other words, functional longevity contributes to have flocks with a better cost-effectiveness, not by increasing takings, but by decreasing production costs through reduced early culling. Genomics has been fully involved during these last years in dairy sheep breeding schemes with, on one hand, the selection for resistance to scrapie thanks to the genetic typing of the PrP gene widely implemented right at the beginning of the 2000s, on the other hand genomic breeding prospects which are subject to Roquefort'in (Lacaune breed) and Genomia (Pyrenean dairy sheep breeds – Manech and Basco-Béarnaise) programmes. Since 2015 (choice of young rams at the end of 2014), Lacaune breed implemented a genomic selection with a new scheme design.

The genetic improvement of dairy sheep within the three French traditional breeding areas ("Rayon"de Roquefort, Pyrénées-Atlantiques, Corse) is based on the breeding of local breeds within their own production area and systems. This principle is strengthened by the French AOC label (which guarantees the origin of a product) of each area. This label requires the local breed as the genetic material to be used for the cheese production of Roquefort (Lacaune breed), of Issau-Iraty (Basco-Béarnaise and Manech breeds) and Brucciu (Corse breed). The implementation of dairy sheep breeding programmes is based on milk recording and progeny testing of animal insemination rams. It has systematically been well-reasoned in order to increase its efficiency-cost ratio

Pyramidal structure of the population

Breeds' population is organized on the basis of a pyramidal structure made up of breeders, creators of the genetic gain and farmers using genetic gain, in order to select the local breeds in population-wide terms. Selection tools are gathered in flocks of breeders who are registered at the official milk recording organizations. These tools include qualitative recording and breeding animals' qualification with possibly udder scoring. Breeding flocks serve as a testing medium and provide the breeding centers with young rams. Testing has been developed in order to maximize breeding schemes. The effort required for its implementation is considerable as (depending on the breeds) 50 to 60 % of the inseminated ewes within a flock under breeding are inseminated with tested rams. Breeders receive as compensation inseminations with the elite rams, i.e. the sires of the breed's rams. If they wish it, the breeders who use the genetic gain may receive a simplified milk recording. Its objective is firstly to get a within-flock ranking of the ewes, but also the technical monitoring of the dairy flock.

Rationalization and optimization over the time

Breeding objectives have been planned gradually. Official milk recording implemented in the 60s was at the beginning only a quantitative control (milk yield) due to the industry needs of milk on one hand, and because of the low initial productivity of the French local breeds on the other hand. The first objective was clearly to increase ewes' productivity. The breeding criteria taken in consideration was the milk yield during the milking period which steps up fat and protein contents quantities, and thereby cheese quantities.

Such an objective may be accepted during the start-up period of the breeding scheme. However, when this objective is fully operational and becomes completely effective (in the 80s for the Lacaune breed, in the 90s – 2000s for the Pyrenean breeds), the milk quality (fat and protein contents) deteriorates on a genetic level speaking. Thus, it is becoming essential to be interested in the chemical quality of the milk also in order to know about cheese yield and the fat/dry ratio of cheese in the framework of AOC cheese produced with raw milk and whole milk. That's why a qualitative recording was to be performed, although it is difficult and expensive to implement in dairy sheep because of the flocks' size and the rapid mechanical milking routines.

Finally, when the context of the industry was such as productivity was no longer directly looked for, breeders became then interested in functional characteristics which are going to enable to decrease production costs and to improve work conditions, especially milking conditions which represent the first work station of dairy ewes' breeding.

Today, farmers and stakeholders of selection schemes raise the question of hardiness and plasticity and evoke the wish to work on resistance to gastro intestinal parasitism, dairy persistency, ability to one-milking per day, feed efficiency, but also the ability to transhumance and at the valorization of rangelands.

Milk recording simplification

The official AC design (monthly recording of one of the two daily milkings, whatever the milking) has been widespread. The qualitative recording has been even more simplified. Only a part of the ewes is recorded: the primiparous (Pyrenean breeds) or the first two lactations (Lacaune breed). Only the middle of the lactation is controlled, because it is the most representative period from a genetic point of view. Thus, the objective is to carry out three samples at the first four test-days of the ewe during the morning milking. The morning milking enables a better milk sampling, especially of the fat content and somatic cells. The partial recording as described here above enables to save about 85% of the samplings and analyses in order to get an efficiency a bit lower (the loss of precision may easily be compensated for rams by increasing the testing daughters' number by about 10%), compared to the exhaustive A4 recording method (on a monthly rhythm for the two daily milkings and for all the ewes on milking). This process is also systematically used for functional characteristics.

Table 1: Evolution of the main criteria related to breeding schemes for the 3 French breeding areas

| | | Official milk recording (OMR) | | | | Simplified milk recording (SMR) |
|------|----------|--|------------------------|-------------------------------|--|------------------------------------|
| | | Number of recorded ewes (% of the OMR population) | AI rate in the nucleus | Number of progeny-tested rams | Milk yield in liters (lactation duration) | Number of recorded ewes |
| 1985 | Rayon | 113 519 (17%) | 70% | 430 | 186 (162) | 311 000 |
| | Pyrénées | 38 026 (12%) | 30% | 52 | 92 (127) | 13 000 |
| | Corse | 7 300 (7%) | | | 88 (151) | |
| 2005 | Rayon | 176 936 (21%) | 81% | 477 | 277 (163) | 585 000 |
| | Pyrénées | 108 836 (23%) | 55% | 200 | 158 (146) | 32 000 |
| | Corse | 20 408 (20%) | 39% | 40 | 124 (181) | |
| 2020 | Rayon | 189 147 (17%) | 87% | 319 | 339 (174) | 505 457 |
| | Pyrénées | 121 136 (28%) | 48% | 278 | 231 (156) | 38 026 |
| | Corse | 20 157 (24%) | 36% | 17 | 149 (189) | 13 446 |
| 2021 | Rayon | 192 923 (19%) | 88% | 297 | 346 (176) | 483 869 |
| | Pyrénées | 123 388 (28%) | 47% | 262 | 239 (159) | 38 532 |
| | Corse | 18 860 (22%) | 35% | 21 | 153 (188) | 9 397 |

Data processing

Annual results of the sheep official milk recording are calculated from an extract of the French national dairy sheep database used for indexing and research, which is part of the SIEOL Information System. This extract was performed at the end of the dairy sheep year in December 2021. Thus, these results concern the year 2021. Regarding the seasonality of the dairy sheep production in France, all lactations are considered as finished and qualified if they are calculated.

The results are presented by breeding area, French local administrative area (=French "département"), Milk Recording Organization (MRO), Performance Testing organization and by breed. Here are the definitions of these terms:

Breeding areas: 1 = 'Rayon de Roquefort' ; 2 = 'Corse' ; 3 = 'Pyrénées-Atlantiques'.

French local administrative areas: 11, 12, 2A, 2B, 30, 34, 48, 64, 65, 81, 82.

Milk Recording Organizations (=MRO): 'CDEO', 'Confédération Générale de Roquefort', 'EDE 48', 'EDE 81', 'EDE 82', 'SCP 30-34', 'SUAE Corse du Sud', 'SUAE Haute-Corse', 'UNOTEC 12'.

Recognized Performance Recording Organizations (=RPRO): 'CDEO', 'OS Lacaune', 'EDE 82', 'SUAE Corse du Sud', 'SUAE Haute-Corse'.

Breeds: 'Lacaune', 'Manech tête rousse', 'Manech tête noire', 'Basco-Béarnaise', 'Corse'. Other breeds representing less than 50 ewes nationwide are not taken into account in these results.

NB : In paragraphs 2.2 to 2.6, maps only show French local administrative areas where at least 10 lactations have been calculated for the corresponding breed.

Warning:

Results between breeds or populations (Basco-Béarnaise, Corse, Lacaune, Manech Tête Rousse, Manech Tête Noire) should not be compared, mainly for two reasons:

- Each breed is represented only in one breeding area. Therefore, genetic type and dominant farming system(s) of each French administrative region are closely linked.
- The calculation of milk yield at milking period varies from one region to another (and for breeds accordingly), in relation with the average suckling length, depending on the farming system:
 - 25 days in the area of Roquefort,
 - 35 days in the Pyreneans area and in Corsica.

Some definitions :

Total number of ewes: ewes present in the flock at the beginning of the lambing period.

Number of ewes in lactation: ewes for which calculating a lactation has been possible (so this total takes into account ewes that had at least one test-date with non-null milk production record).

Number of ewes that lambed: ewes with a date of lambing, non-pregnant ewes, aborted ewes without milk and not mated ewe in 1st lactation are therefore excluded from this total.

Lambing rate: number of ewes which lambed divided by the total number of ewes (expressed in %).

Lactation rate: number of ewes with calculation of lactation divided by the number of ewes which lambed (expressed in %).

Milk yield: it represents the milk yield at the milking-only period.

This milk yield is calculated only on the period of exclusive milking of the animal after the weaning of the lamb(s), and doesn't take into account the milk yield during the initial period of suckling or suckling x milking. So the **milking duration** matches only to this milking-only period. The milk yield is expressed in liters and the length in days.

The official milk recording is an AC milk recording protocol, i.e. a monthly control of one of the two daily milkings, without any obligation of rotation. However, the recording occurs mainly in the morning because the sampling for the qualitative control is more precise during the morning milking (more milk in the morning).

Results for fat and protein contents are not provided. The sheep qualitative control is indeed a very simplified control (partial qualitative recording). It is based on a sampling performed only at the milking of the morning, on 3 recordings during the middle of the lactation and it concerns only a part of the flock (the primiparous or the first 2 lactations, depending on the breed). The way of recording and calculating the fat and protein contents are relevant for genetics, but are not representative of current economic reality.

Trends for 2021

Increasing by 4,740 (+1.4%), the total number of ewes present at the lambing period reached 335,171 in 2021. At the same time the total number of ewes with lactation calculation is increasing on 6,879 and reaches 285,321 (+2.4%). This increase of the ewes number on official milk recording (CLO) puts an end to the stability observed over the previous two years.

750 flocks are counted up today in Official Milk Recording, which is identical to that of the previous year. Meanwhile, with 447 ewes, the average size of flock still progressed in 2021 (441 ewes in 2020, 433 in 2019 and 428 in 2018).

In 2021 the average milk yield is increasing for all breeds, Lacaune and Manech Tête Rousse breeds +7.3 liters, Basco Béarnaise breed +10 liters, Corse breed +3.8 liters, Manech Tête Noire breed +8.8 liters. At the national level the milk yield reached 299.2 liters (+7.6 liters) in 171 days (+2 days).

A simplified milk recording, corresponding to the D recording method in the ICAR nomenclature and not presented in this document, exists in addition to the Official Milk Recording AC design. It concerns commercial flocks out of the selection nucleus (while the Official Milk Recording is devoted only to breeders involved in the selection program). 1,156 flocks and 531,798 ewes present at the lambing period were submitted to D recording in 2021.

Milk recording results

France 2021

CATTLE: 32,669 herds provided 2,064,131 qualified lactations in 2021. Decreasing respectively from 6.1% and 6.2% the herd number and the number of qualified lactations confirm the trend observed since several years. The three main French national breeds (Prim'Holstein, Montbéliarde and Normande) represent henceforth 90.6% of the total of qualified lactations (-0.4% compared to 2020). With 46.8% the percentage of herds with more than 60 qualified lactations is stable in 2021, confirming the end of the rising trend observed the previous year (46.8 in 2020, 47.5 in 2019, 45.1% in 2018 and 40.1% in 2017). In the same time, with 68.8% the rate of qualified lactations they represent follow the same trend (68.8 in 2020, 69% in 2019, 66.9% in 2018 and 63.1% in 2017). With an average milk production for complete lactations at 8,887 Kg, the milk yield is increasing in 2021 (+ 180kg). In the same time the average lactation duration reach 344 days (+4 days). Mean fat and protein rates reach respectively to 40.6 g/kg for fat (+0.1) and 32.9 g/kg for proteins (+0.1). A noticeable improvement in somatic cell count situation is again observed. The proportion of lactations for which all the test-dates obtain cell counts lower than 300,000 cells and the proportion of lactations having at least 2 test-dates with cell counts higher than 800,000 reach respectively 54.1% et 11.3%.

GOAT: The number of qualified lactations is slightly increasing in 2021 to reach 235,778 lactations (+ 2.863 lactations, +1.2 %). At the same time, the number of flocks is slightly decreasing to reach 1,457 flocks (-1.1%). The two main breeds (Alpine and Saanen) represent henceforth 96.5% of the total of qualified lactations. The proportion of primiparous dairy goats is slightly increasing and reaches 36 % (+0.5%), confirming the trend observed since 2018 (+0.8% in 2019, +1.7% in 2020). The milk yield reach 992 Kg per lactation (+3Kg). The lactation duration is stable at 321 days, confirming the increase observed for a few years (298 days in 2014). Meanwhile true-protein and fat rates are still increasing and reaches respectively 33.6 g/Kg (+0.2) and 37.7 g/Kg (+0.1).

SHEEP: Increasing by 4,740 (+1.4%), the total number of ewes present at the lambing period reached 335,171 in 2021. At the same time the total number of ewes with lactation calculation is increasing on 6,879 and reaches 285,321 (+2.4%). This increase of the ewes number on official milk recording (CLO) puts an end to the stability observed over the previous two years. 750 flocks are counted up today in Official Milk Recording, which is identical to that of the previous year. Meanwhile, with 447 ewes, the average size of flock still progressed in 2021 (441 ewes in 2020, 433 in 2019 and 428 in 2018). In 2021 the average milk yield is increasing for all breeds, Lacaune and Manech Tête Rousse breeds +7.3 liters, Basco Béarnaise breed +10 liters, Corse breed +3.8 liters, Manech Tête Noire breed +8.8 liters. At the national level the milk yield reached 299.2 liters (+7.6 liters) in 171 days (+2 days). A simplified milk recording, corresponding to the D recording method in the ICAR nomenclature and not presented in this document, exists in addition to the Official Milk Recording AC design. It concerns commercial flocks out of the selection nucleus (while the Official Milk Recording is devoted only to breeders involved in the selection program). 1,156 flocks and 531,798 ewes present at the lambing period were submitted to D recording in 2021.
