## Data processing

The French Livestock Institute calculated and processed goat milk recording annual results from data extracted from the goat national database (extraction performed on 4 March 2022).

In paragraph 1.1.1, the number of « active » goats refers to goats that belong to a herd with active MR contract and for which at least one milk record has been registered throughout the year.

In paragraph 1.1.2, the number of « active » herds refers to herds with at least one active goat taken into account over the year 2021.

**One lactation per « active » goat, the last terminated one,** is taken into account in the process (under condition of kidding date after January 1st, 2018). Because of the application of these conditions, the results presented in this report do not include primiparous goats having their lactation still on-going.

These selected lactations can be qualified or not.

Non-qualified lactations are taken into account only for calculation of the number of terminated lactations (see paragraph 1.2 and column « Terminated lactations » of table 1.4).

Calculated results (from the paragraph 1.3) refer only to **qualified lactations**.

The distribution of these lactations per year of kidding and of drying off is presented in the table 1.3.1.

In table 3.1.3, average age at 1st kidding is calculated for a breed only when the total of lactations exceeds 40 at national level.

In table 5.3, the milk recording protocol applied for a given lactation is in accordance with the current French guidelines for goat milk recording: « *when milk recording protocol changes for a herd, for example from A to AZ, CZ or AT, the on-going lactations are calculated and qualified according to the protocol which gives less accurate information (AT < CZ < AZ < A)* ».

Herds taken into account are those for which lactation results are available, in accordance with the rules previously given.

## Trends for 2021

The number of qualified lactations is slightly increasing in 2021 to reach 235,778 lactations (+ 2,863 lactations, +1.2 %). At the same time, the number of flocks is slightly decreasing to reach 1,457 flocks (-1.1%).

The two main breeds (Alpine and Saanen) represent henceforth 96.5% of the total of qualified lactations.

The proportion of primiparous dairy goats is slightly increasing and reaches 36 % (+0.5%), confirming the trend observed since 2018 (+0.8% in 2019, +1.7% in 2020).

The milk yield reach 992 Kg per lactation (+3Kg). The lactation duration is stable at 321 days, confirming the increase observed for a few years (298 days in 2014). Meanwhile true-protein and fat rates are still increasing and reaches respectively 33.6 g/Kg (+0.2) and 37.7 g/Kg (+0.1).

# I - NATIONAL RESULTS

## 1.1 - Overall milk recorded population

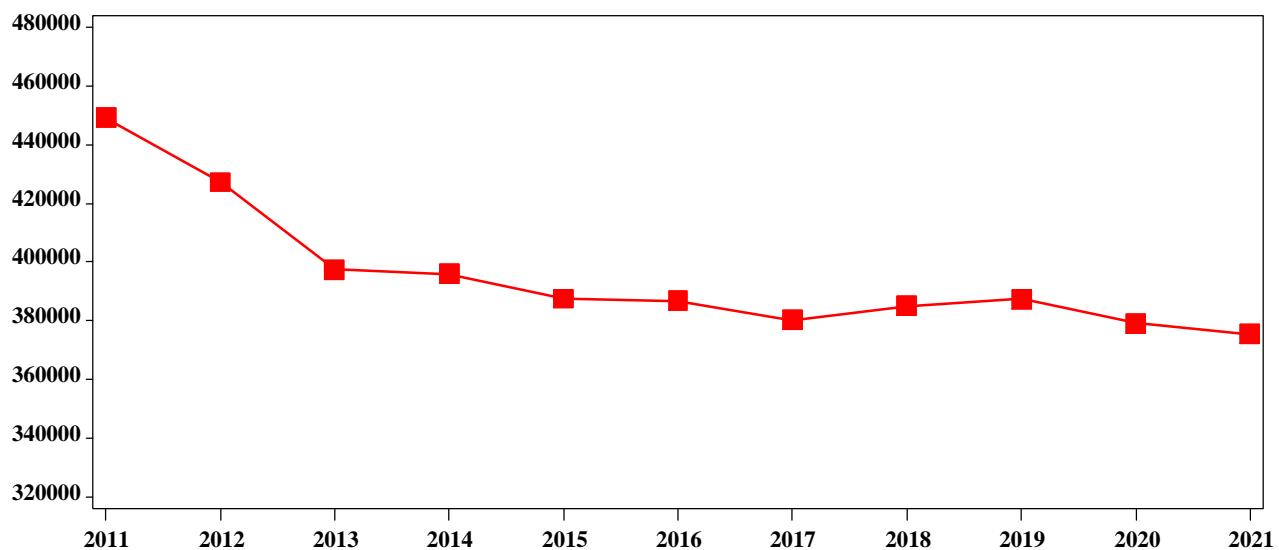

### 1.1.1 - Total number of active herds in 2021\*

1,422 herds

### 1.1.2 - Total number of active goats in 2021\*

375,492 goats

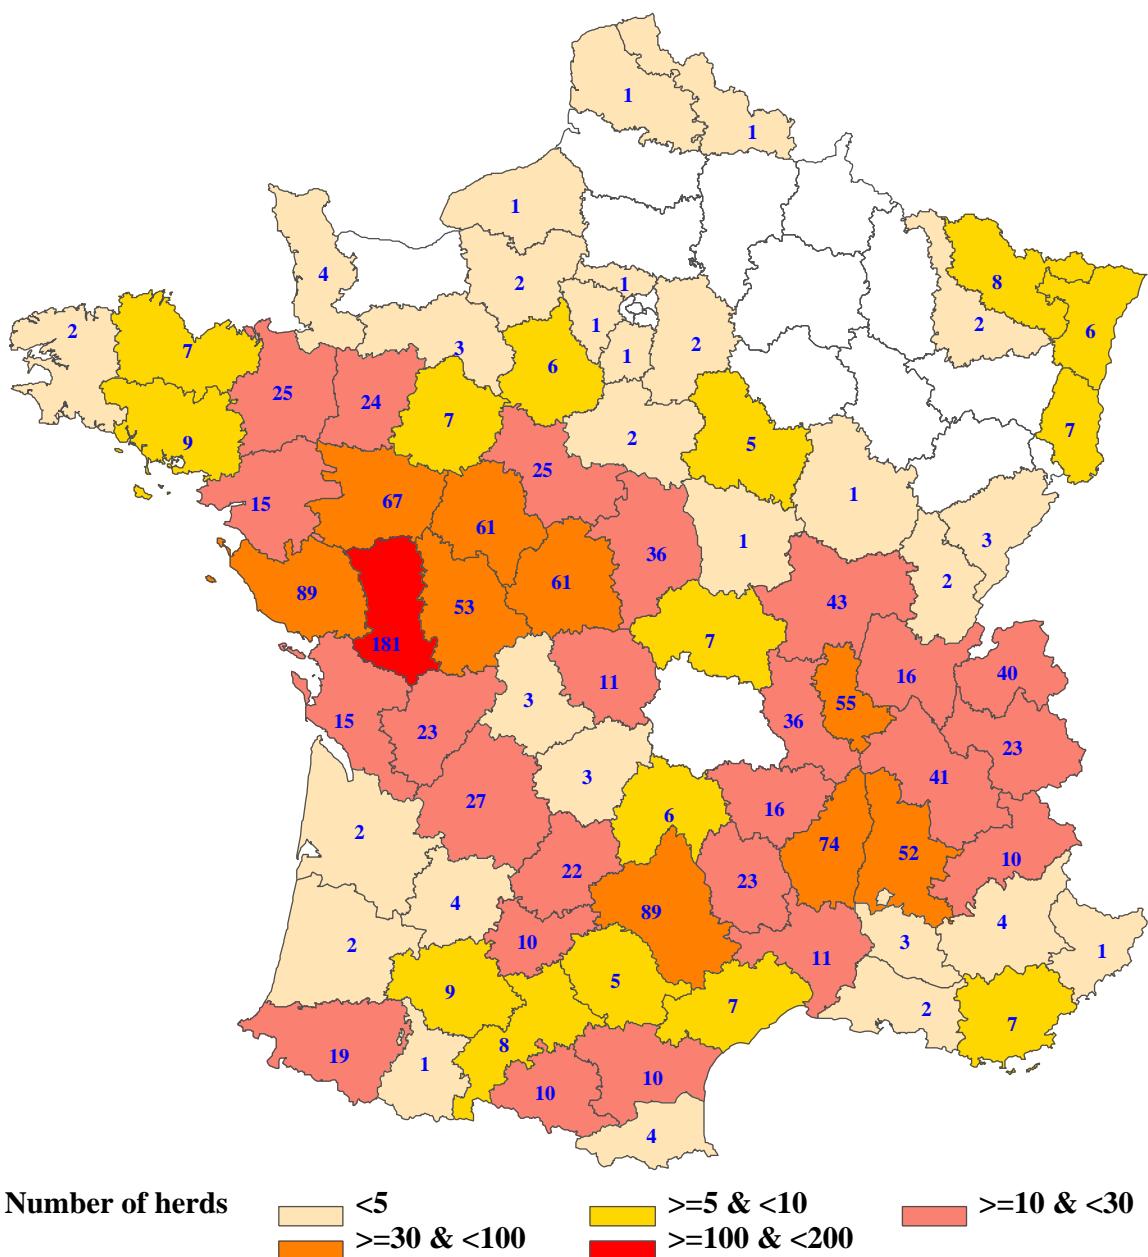

\* For information about how the number of « active herds » and « active goats » is calculated, refer to « Data processing » paragraph (cf. page 2).

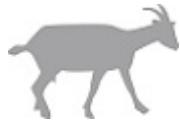

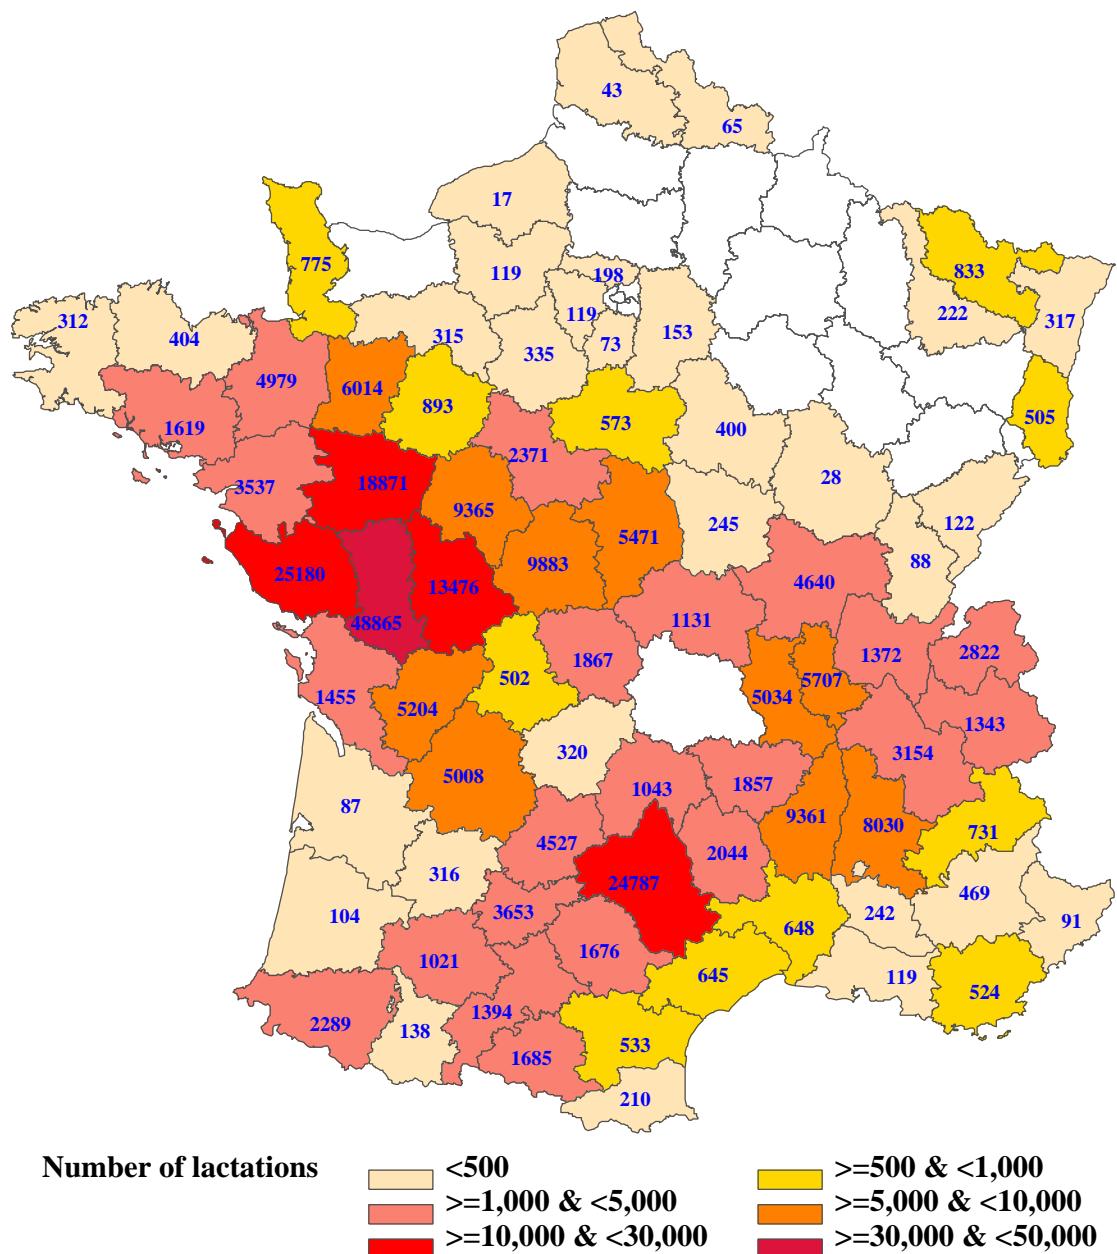

## 1.2 - Terminated lactations

<b>Total number of herds with terminated lactations</b>	1,476
<b>Total number of terminated lactations</b>	264,568
<b>Average number of terminated lactations per herd</b>	179.2
<b>Total number of herds with qualified lactations</b>	1,457
<b>Total number of herds with qualified lactations</b>	235,778

## 1.3 - Qualified Lactations

### 1.3.1 - Distribution of qualified lactations per year of kidding and of drying off

Year of kidding	Year of drying off								Total	
	2018		2019		2020		2021			
	Nb	%	Nb	%	Nb	%	Nb	%	Nb	%
2018	221	0.1	621	0.3	1,591	0.7	980	0.4	3,413	1.4
2019			1,784	0.8	18,756	8.0	6,162	2.6	26,702	11.3
2020					26,873	11.4	72,673	30.8	99,546	42.2

# III - RESULTS PER BREED

## 3.1 - Overall results

### 3.1.1 - Complete lactations

Breed	Number of lactations	Lactation duration days	Milk yield kg	True protein content kg	True protein % g/kg	Fat content kg	Fat % g/kg	Kidding interval days	Average lactation rank
Alpine	146,854	317	978	33.2	34.0	37.4	38.3	395	2.4
Saanen	80,750	329	1,034	34.0	32.9	38.0	36.7	404	2.4
Crossbred	7,089	315	878	29.3	33.4	32.9	37.5	402	2.5
Poitevine	351	265	530	16.2	30.5	18.6	35.1	386	3.9
Chèvre des Savoie	307	248	475	13.5	28.5	16.3	34.2	361	3.2
Massif Central	50	273	463	13.2	28.5	17.0	36.8	397	2.5
Pyrénéenne	43	208	209	6.0	28.9	7.6	36.7	372	3.9
Other breeds	334	264	539	16.9	31.4	20.1	37.2	370	2.7
<b>Overall total</b>	<b>235,778</b>	<b>321</b>	<b>992</b>	<b>33.3</b>	<b>33.6</b>	<b>37.4</b>	<b>37.7</b>	<b>398</b>	<b>2.4</b>

### 3.1.2 - Reference lactations

Two scenarios are possible for calculating the reference lactations:

1. 1. The complete lactation exceeds the reference period (example: 250 days for the Alpine breed).  
In this case, the results of the reference lactation are calculated by interpolation, using the Fleischmann method.
2. 2. The complete lactation does not exceed the reference period.  
In that case, the results of the reference lactation and the complete lactation are identical.

Breed	Number of lactations	Reference duration days	Milk yield kg	True protein % g/kg	Fat % g/kg
Alpine	146,854	250	822	33.4	37.7
Saanen	80,750	250	818	32.4	36.3
Crossbred	7,089	250	718	32.8	37.0
Poitevine	351	230	492	30.1	34.8
Chèvre des Savoie	307	150	333	28.1	33.9
Massif Central	50	150	323	28.0	37.5
Pyrénéenne	43	170	175	28.4	36.3
Other breeds	334	150	378	30.6	36.9
<b>Overall total</b>	<b>235,778</b>		<b>816</b>	<b>33.0</b>	<b>37.2</b>

Note: comparing the results obtained by the different breeds should be avoided as long as a specific reference lactation duration is defined for each breed.

### 3.1.3 - Average age at 1st kidding

NB: This criterion is calculated only when the date of birth of a goat is known.

Breed	Number of lactations	Average age at 1st kidding days
Alpine	<b>50,145</b>	<b>393</b>
Saanen	<b>28,128</b>	<b>388</b>
Crossbred	<b>2,232</b>	<b>406</b>
Chèvre des Savoie	<b>70</b>	<b>468</b>
Poitevine	<b>51</b>	<b>521</b>
Pyrénéenne	<b>3</b>	<b>NS*</b>
Massif Central	<b>1</b>	<b>NS*</b>
Other breeds	<b>91</b>	<b>453</b>

\*NS : Not significant (cf. paragraph « Data processing » page 2 for details).

# Milk recording results of goats

## France 2021

The number of qualified lactations is slightly increasing in 2021 to reach 235,778 lactations (+ 2.863 lactations, +1.2 %). At the same time, the number of flocks is slightly decreasing to reach 1,457 flocks (-1.1%). The two main breeds (Alpine and Saanen) represent henceforth 96.5% of the total of qualified lactations. The proportion of primiparous dairy goats is slightly increasing and reaches 36 % (+0.5%), confirming the trend observed since 2018 (+0.8% in 2019, +1.7% in 2020). The milk yield reach 992 Kg per lactation (+3Kg). The lactation duration is stable at 321 days, confirming the increase observed for a few years (298 days in 2014). Meanwhile true-protein and fat rates are still increasing and reaches respectively 33.6 g/Kg (+0.2) and 37.7 g/Kg (+0.1).
