## Data processing

The French Livestock Institute calculated and processed goat milk recording annual results from data extracted from the goat national database (extraction performed on 8 March 2024).

From 2023, due to the implementation of a breeder's consent to the collective use of data, lactations of herds not authorizing a collective data use are no longer classified as CLO (Official Milk Recording). Thus in 2024, there are 685 lactations which are not taken into account in the results presented below.

In paragraph 1.1.1, the number of « active » goats refers to goats that belong to a herd with active CLO MR contract having accepted a collective data use and for which at least one milk record has been registered throughout the year

In paragraph 1.1.2, the number of « active » herds refers to herds with at least one active goat taken into account over the year 2024.

**One lactation per « active » goat, the last terminated one,** is taken into account in the process (under condition of kidding date after January 1st, 2021). Because of the application of these conditions, the results presented in this report do not include primiparous goats having their lactation still on-going.

These selected lactations can be qualified or not.

Non-qualified lactations are taken into account only for calculation of the number of terminated lactations (see paragraph 1.2 and column « Terminated lactations » of table 1.4).

Calculated results (from the paragraph 1.3) refer only to **qualified lactations**.

The distribution of these lactations per year of kidding and of drying off is presented in the table 1.3.1.

In table 3.1.3, average age at 1st kidding is calculated for a breed only when the total of lactations exceeds 40 at national level.

In table 5.3, the milk recording protocol applied for a given lactation is in accordance with the current French guidelines for goat milk recording: « *when milk recording protocol changes for a herd, for example from A to AZ, CZ or AT, the on-going lactations are calculated and qualified according to the protocol which gives less accurate information (AT < CZ < AZ < A)* ».

Herds taken into account are those for which lactation results are available, in accordance with the rules previously given.

## Trends for 2024

With 223,132 the number of qualified lactations is decreasing in 2024 (-3,310 lactations -1.5%). At the same time, the number of flocks decrease and reach 1,388 flocks (- 4.7%).

Flocks with more than 250 lactations represent 21% of herds and 49.3 % of lactations.

The two main breeds (Alpine and Saanen) represent henceforth 96.9% of the total of qualified lactations.

After a increase period, with only 36.9% (-0.4%), the proportion of primiparous dairy goats decrease in 2024 (+0,8% en 2019, +1,7% en 2020, +0,5% en 2021, +0.6 en 2022, +0,7 en 2023).

With an average at 1027 Kg the milk yield per goat passes the 1000 Kg mark for the third time (1002 Kg in 2022). Lactation duration increases significantly again and reach 337 days confirming the trend observed for a few years (298 days in 2014).

Meanwhile protein and fat rates reach 33.8 g/Kg for true-protein (+0.2 g) and 37.8 g/Kg for fat (+0.24 g).

A simplified milk recording (CLS), not presented in this document, exists in addition to the Official Milk Recording (CLO) the results of which are presented in this document. Simplified milk recording concerns 378 (- 0.5 %) herds and 74,317 (-2%) goats in 2024.

# I - NATIONAL RESULTS

## 1.1 - Overall milk recorded population

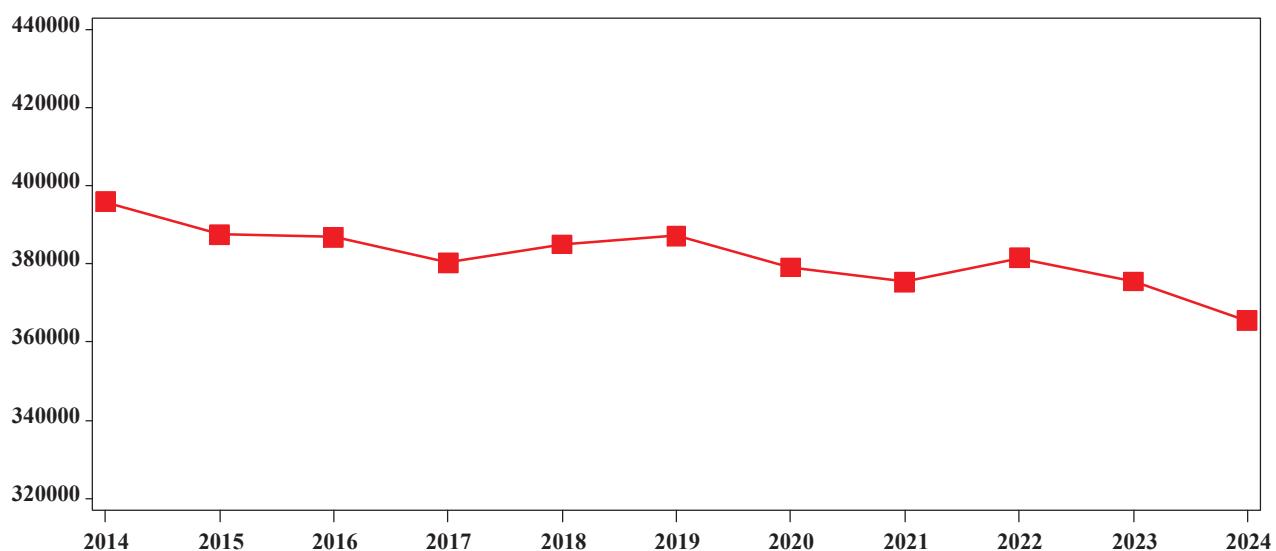

### 1.1.1 - Total number of active herds in 2024\*

1,368 herds

### 1.1.2 - Total number of active goats in 2024\*

365,516 goats

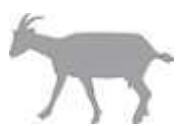

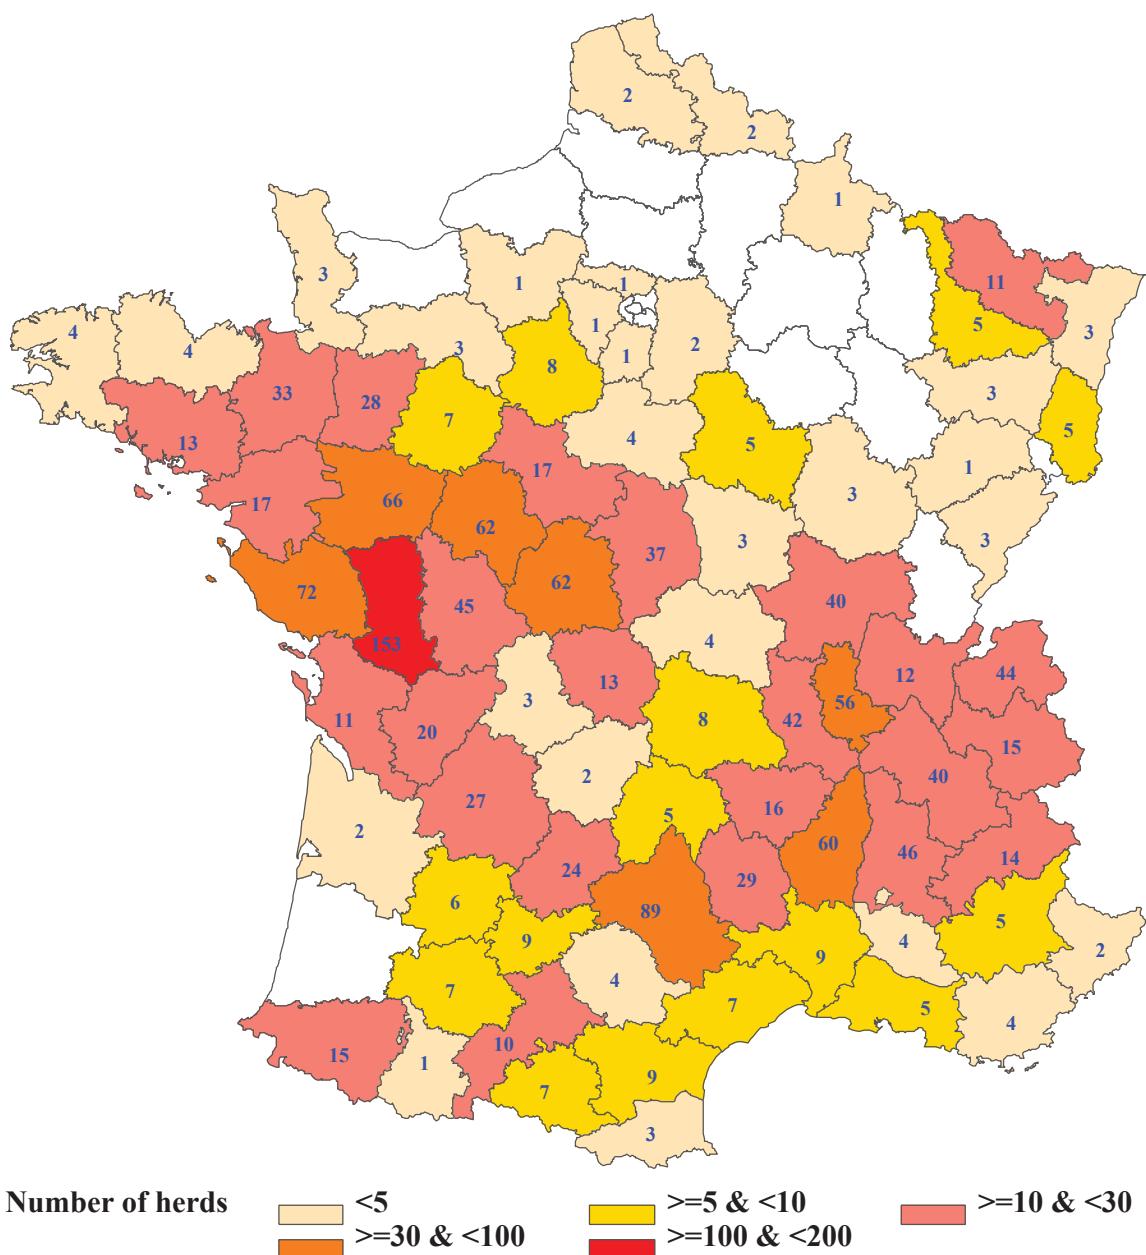

\* For information about how the number of « active herds » and « active goats » is calculated, refer to « Data processing » paragraph (cf. page 2).

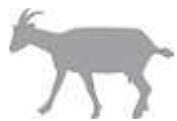

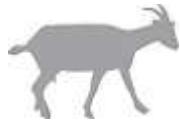

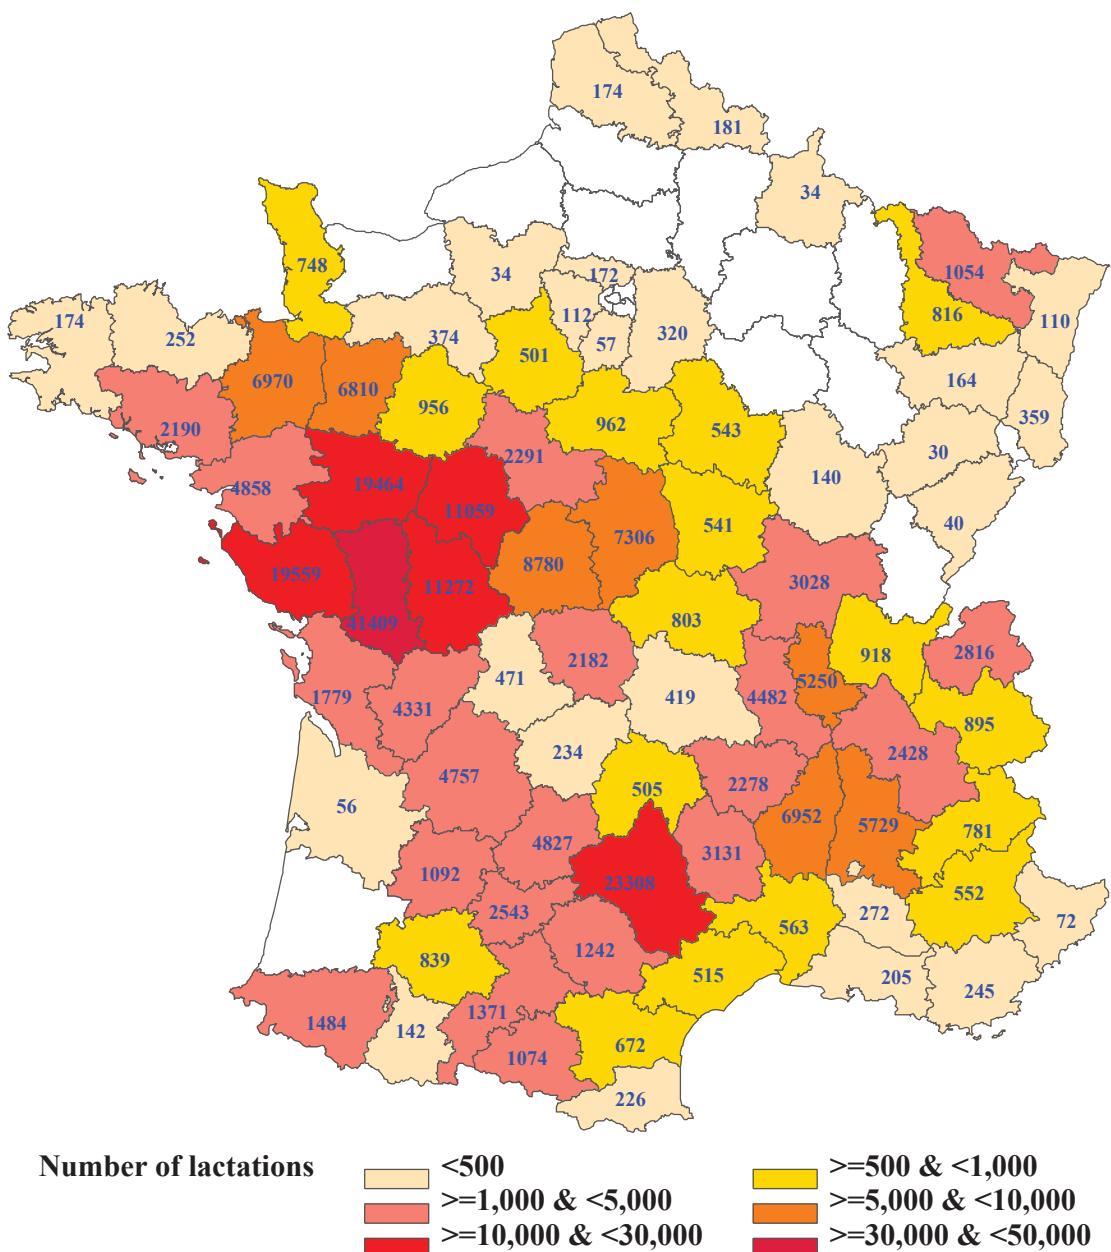

## 1.2 - Terminated lactations

<b>Total number of herds with terminated lactations</b>	1,420
<b>Total number of terminated lactations</b>	246,285
<b>Average number of terminated lactations per herd</b>	173.4
<b>Total number of herds with qualified lactations</b>	1,388
<b>Total number of herds with qualified lactations</b>	223,132

## 1.3 - Qualified Lactations

### 1.3.1 - Distribution of qualified lactations per year of kidding and of drying off

Year of kidding	Year of drying off								Total	
	2021		2022		2023		2024			
	Nb	%	Nb	%	Nb	%	Nb	%	Nb	%

# III - RESULTS PER BREED

## 3.1 - Overall results

### 3.1.1 - Complete lactations

Breed	Number of lactations	Lactation duration days	Milk yield kg	True protein content kg	True protein % g/kg	Fat content kg	Fat % g/kg	Kidding interval days	Average lactation rank
Alpine	147,299	332	1,000	34.2	34.2	38.4	38.4	400	2.3
Saanen	68,968	349	1,105	36.5	33.1	40.4	36.6	420	2.3
Crossbred	5,620	329	895	30.1	33.7	33.4	37.3	410	2.5
Poitevine	398	279	523	15.7	30.1	18.0	34.4	383	3.5
Chèvre des Savoie	336	293	523	15.2	29.1	17.4	33.3	379	3.1
Chèvre de Lorraine	254	242	471	14.4	30.5	17.0	36.0	360	2.9
Massif Central	83	290	531	15.6	29.3	18.8	35.4	363	3.0
Other breeds	174	284	634	20.7	32.7	25.6	40.3	380	2.9
<b>Overall total</b>	<b>223,132</b>	<b>337</b>	<b>1,027</b>	<b>34.7</b>	<b>33.8</b>	<b>38.8</b>	<b>37.8</b>	<b>406</b>	<b>2.3</b>

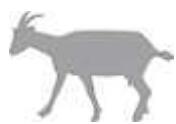

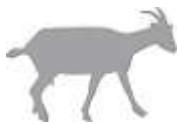

### 3.1.2 - Reference lactations

Two scenarios are possible for calculating the reference lactations:

1. **The complete lactation exceeds the reference period (example: 250 days for the Alpine breed).**  
In this case, the results of the reference lactation are calculated by interpolation, using the Fleischmann method.
2. **The complete lactation does not exceed the reference period.**  
In that case, the results of the reference lactation and the complete lactation are identical.

Breed	Number of lactations	Reference duration days	Milk yield kg	True protein % g/kg	Fat % g/kg
Alpine	147,299	250	812	33.5	37.8
Saanen	68,968	250	832	32.4	36.0
Crossbred	5,620	250	713	33.0	36.6
Poitevine	398	230	471	29.7	34.2
Chèvre des Savoie	336	150	342	28.4	33.1
Chèvre de Lorraine	254	240	461	30.4	35.9
Massif Central	83	150	367	28.6	35.6
Other breeds	174	150	380	31.6	39.5
<b>Overall total</b>	<b>223,132</b>		<b>814</b>	<b>33.1</b>	<b>37.2</b>

Note: comparing the results obtained by the different breeds should be avoided as long as a specific reference lactation duration is defined for each breed.

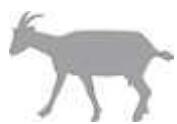

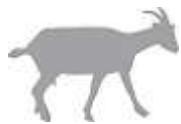

### 3.1.3 - Average age at 1st kidding

NB: This criterion is calculated only when the date of birth of a goat is known.

Breed	Number of lactations	Average age at 1st kidding <i>days</i>
Alpine	52,307	392
Saanen	25,421	386
Crossbred	1,729	403
Poitevine	87	535
Chèvre des Savoie	80	428
Chèvre de Lorraine	53	643
Massif Central	18	NS*
Other breeds	53	444

\*NS : Not significant (cf. paragraph « Data processing » page 2 for details).

# Milk recording results

## Goat

France - Year 2024

### Abstract :

With 223,132 the number of qualified lactations is decreasing in 2024 (-3,310 lactations -1.5%). At the same time, the number of flocks decrease and reach 1,388 flocks (- 4.7%). Flocks with more than 250 lactations represent 21% of herds and 49.3 % of lactations. The two main breeds (Alpine and Saanen) represent henceforth 96.9% of the total of qualified lactations. After a increase periode, with only 36.9% (-0.4%), the proportion of primiparous dairy goats decrease in 2024 (+0.8% en 2019, +1.7% en 2020, +0.5% en 2021, +0.6 en 2022, +0.7 en 2023). With an average at 1027 Kg the milk yield per goat passes the 1000 Kg mark for the third time (1002 Kg in 2022). Lactation duration increases significantly again and reach 337 days confirming the trend observed for a few years (298 days in 2014). Meanwhile protein and fat rates reach 33.8 g/Kg for true-protein (+0.2 g) and 37.8 g/Kg for fat (+0.24 g). A simplified milk recording (CLS), not presented in this document, exists in addition to the Official Milk Recording (CLO) the results of which are presented in this document. Simplified milk recording concerns 378 (- 0.5 %) herds and 74,317 (-2%) goats in 2024.
