Data processing

In paragraph 1.1.1, the **number of active cows** refers to cows still present on the 31st of December 2023 in a herd with active Official Milk Recording (=MR) contract and for which at least one milk record has been registered throughout the year 2023.

In paragraph 1.1.2, the **number of active herds** refers to herds with active Official Milk Recording contract on the 31st of December 2023 and with at least one active cow taken in account over the year (and still present in this herd on the 31st of December 2023).

Annual milk recording results (starting at paragraph 1.2) have been calculated on 27 January 2024 by the Genetic Information Processing Centre (in accordance with the French National Institute for Agricultural Research [INRA] specifications) and processed by the Institut de l'Elevage. These results take into account **one lactation per cow; the last terminated one** (with a calving date after January 1st, 2020). This rule involves that the primiparous still on lactation are therefore not counted up in these results.

These terminated lactations may be qualified or not. The non-qualified ones are taken into account into the calculation of the terminated lactations' overall total (see paragraph 1.1.3) and are classified according to the cause of non-qualification (cf. paragraph 1.3.2) but are not included in the calculation of milk yield and contents results.

The herds for which lactation results are calculated are the only ones taken into account in this document. This total is therefore slightly higher than the number of « active herds » (see results presented in paragraph 1.1) because it takes into account some herds that have been controlled during the previous year but were not active anymore after the 31st of December 2023.

Into the paragraph 1.3.4, the proportion of the non-qualified lactations due to cause of non-qualification A (i.e Interval between calving and 1st test-date > 95 days) and related to a herd with first MR contract is determined as follows:

The first condition is that the date of beginning of the lactation, (= calving date) taken into account in the current results must be prior to the starting date of MR contract of the herd the cow belongs to (link between a cow and a herd is searched at the last test-date in milk of the cow).

In case this first condition is met, one determines whether a previous MR contract did exist for the relevant herd:

- if so, the interval between the date when the previous MR contract ended and the starting date of the next MR contract is calculated. If this interval is over 365 days long, it is considered as a first MR contract for the relevant herd,
- if not so, it is also considered as a first MR contract for the relevant herd.

Only local areas (= French « départements ») for which more than 2 herds and 40 lactations results counted up are in tables 3.2, 3.4 and 3.6. The results presented in tables 3.3, 3.5 and 3.7 take into account only breeds for which at least 40 lactations have been counted up in the corresponding local area having more than 2 herds.

Trends for 2023

28,745 herds provided 1,878,620 qualified lactations in 2023. Decreasing respectively from 5.6% and 4.6% the herd number and the number of qualified lactations confirm the trend observed since several years.

The three main French national breeds (Prim'Holstein, Montbéliarde and Normande) represent henceforth 89.8% of the total of qualified lactations (-0.4% compared to 2022).

With 48.7 %, the percentage of herds of more than 60 qualified lactations increased again in 2023, confirming the upward trend observed for several years (48.2% in 2022, 46.8 in 2021 and 2020, 47.5 in 2019, 45.1% in 2018 and 40.1% in 2017). With an average milk production for complete lactations at 8,938Kg, the milk yield is increasing in 2023 (+60kg). In the same time the average lactation duration reach 346 days (+1 day). Mean fat and protein reaches respectively 40.8 g/Kg (+0.2) and 32.8 g/Kg (+0.1).

A noticeable improvement in somatic cell count situation is again observed. The proportion of lactations for which all the test-dates obtain cell counts lower than 300.000 cells and the proportion of lactations having at least 2 test-dates with cell counts higher than 800.000 reach respectively 58.7% et 10.2%.

I - NATIONAL RESULTS

1.1 - Total milk recorded population

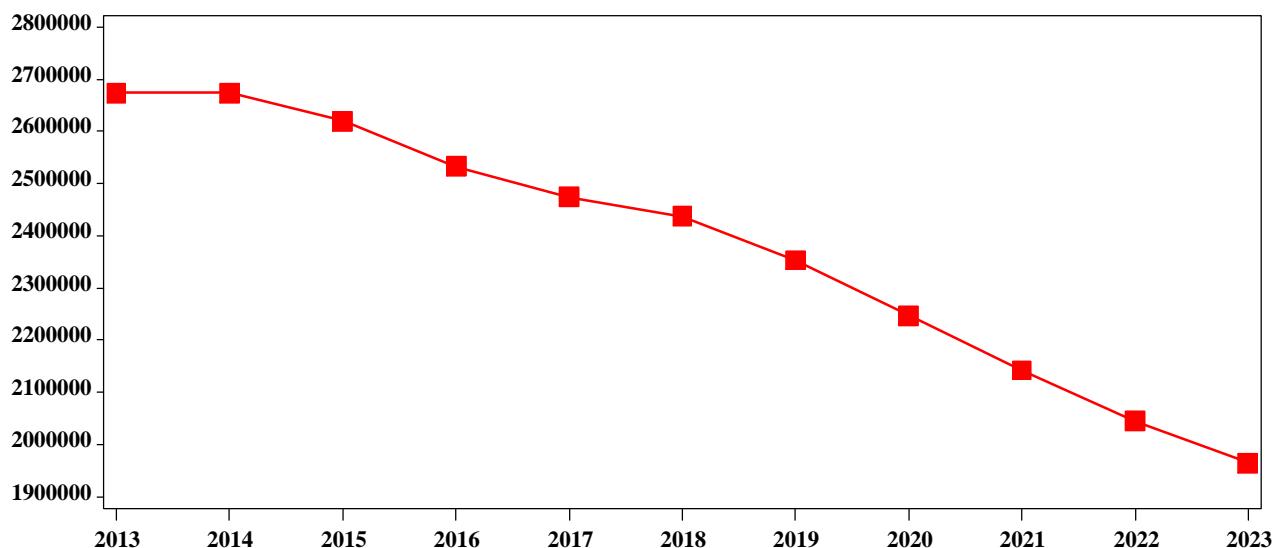

1.1.1 - Total number of active herds on December, 31st, 2023*

25,963 herds

1.1.2 - Total number of active cows on December, 31st, 2023*

1,964,463 cows

For information about how the number of "active herds" and "active cows" is calculated, refer to « Data processing » paragraph (cf. page 4).

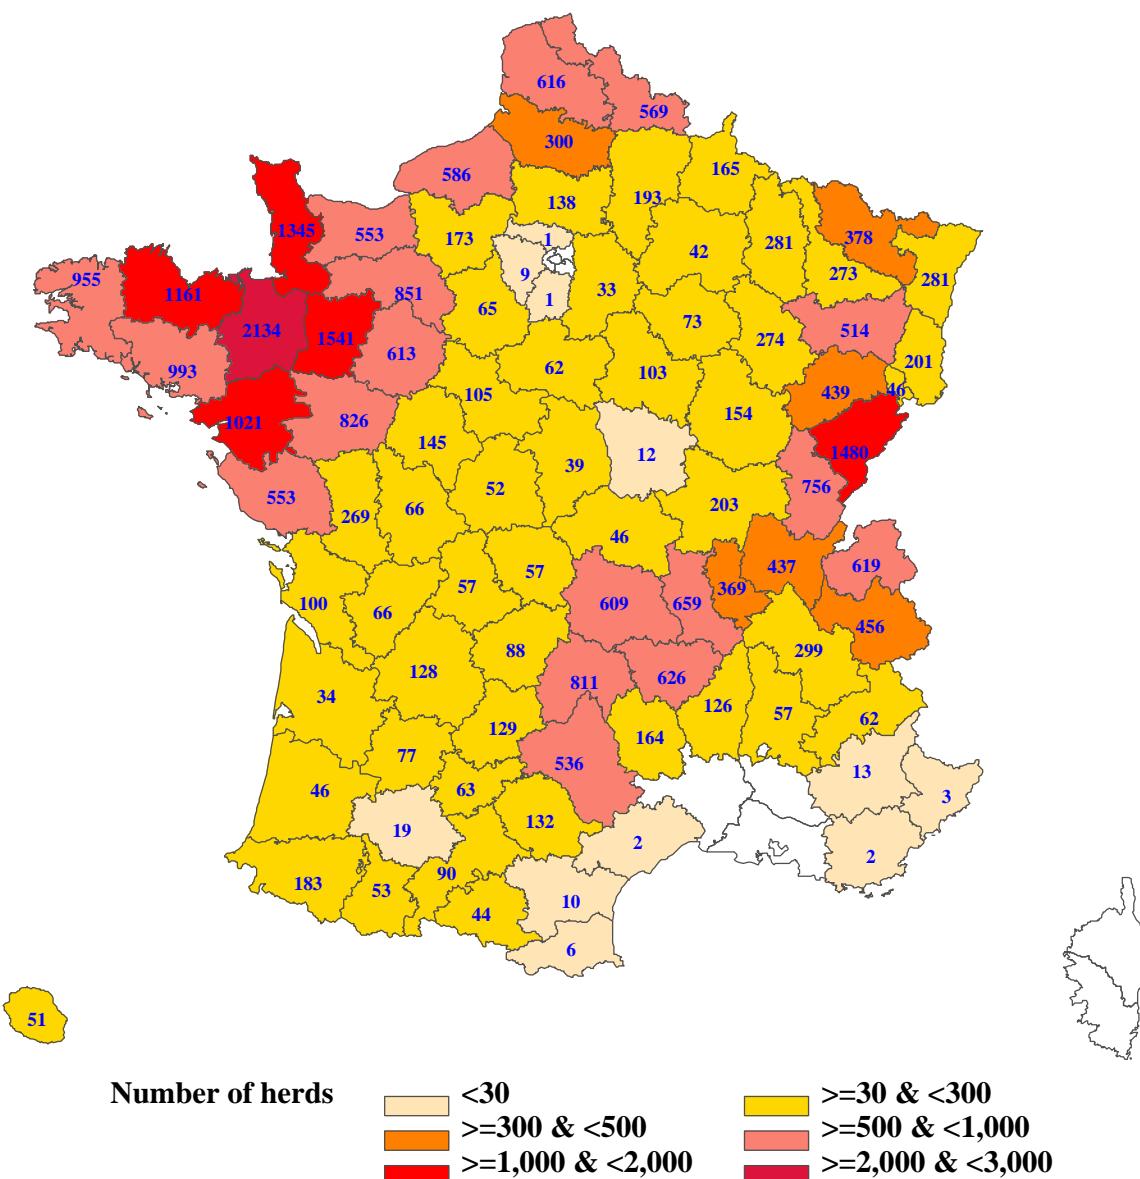

1.1.3 - Terminated lactations

These results take into account the last terminated lactation (qualified or not) of each animal (refer to paragraph « Data processing » on page 4 for further details).

1.1.3.1 - Total number of herds with terminated lactations

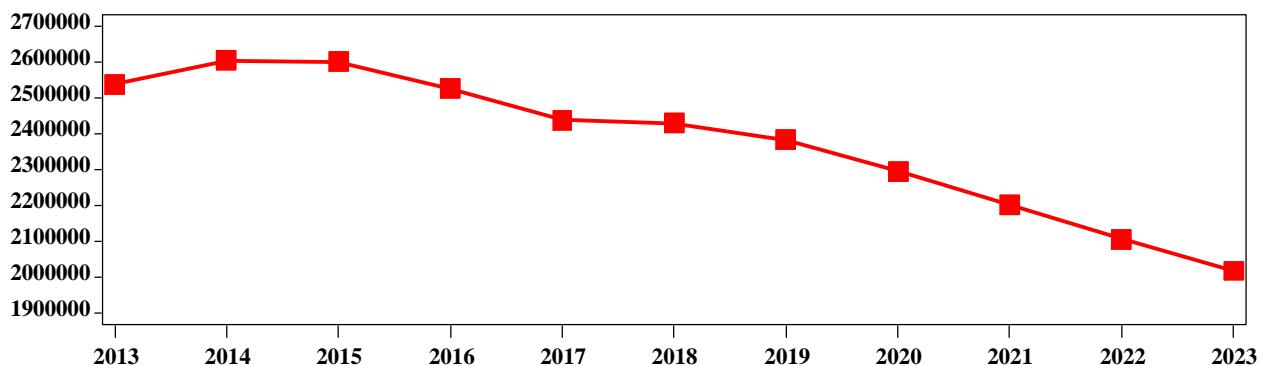

28,972 herds

Herd distribution with terminated lactations per local area (= French “département”)

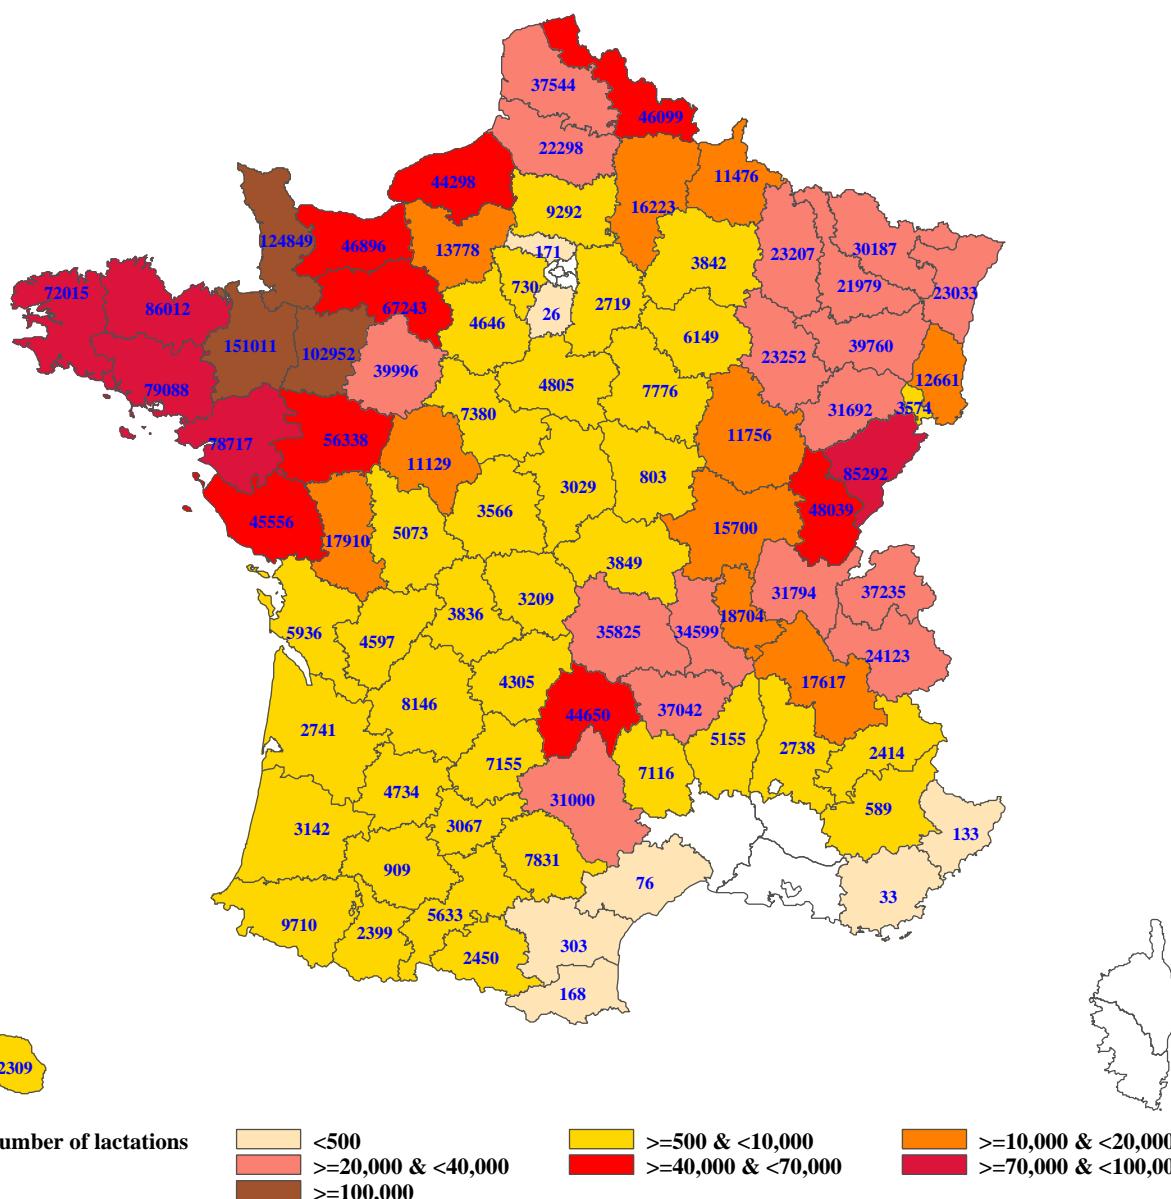

1.1.3.2 - Total number of terminated lactations

2,018,839 lactations

Distribution of terminated lactations per local area

1.2 - Qualified lactations

This table shows the distribution of qualified lactations according to the year of calving and of drying off.

Year of calving	Year of drying off								Overall total	
	2020		2021		2022		2023

Milk yield per calving month – kg

1.2.5 - 305-d lactations (= reference lactations)

Two scenarios are possible for calculating the reference lactations:

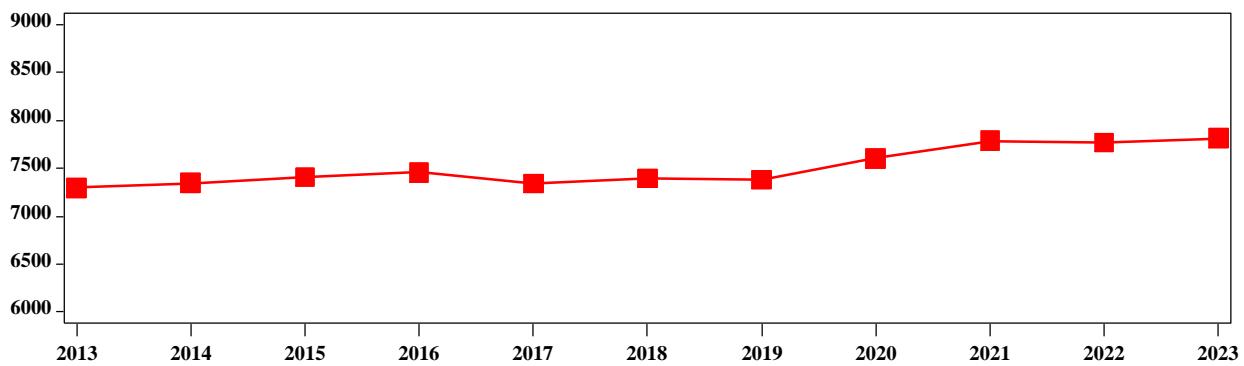

1. The complete lactation exceeds the reference period (305 days). In this case, the results of the reference are calculated by interpolation, using the Fleischmann method.

2. Complete lactation does not exceed the reference period. In this case, the results of the reference lactation are those of the complete lactation.

Fat %o - 305-d lactations - g/kg

True protein %o - 305-d lactations - g/kg

1.2.6 - Adjusted lactations

Steps taken to obtain these results:

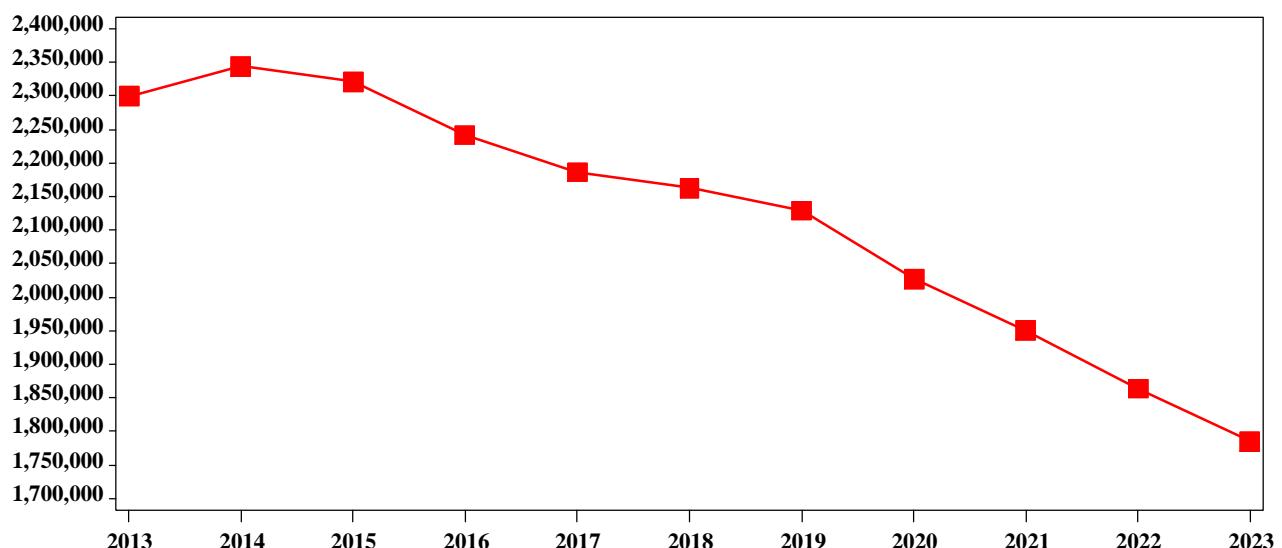

Firstly, exclusion of the lactations with duration lower than 200 days (representing 93,827 lactations, that is to say 5.0 % of the total number).

Secondly, the remaining lactations are adjusted to adult level by multiplying the results for parity 1 to 3 by the following coefficients defined by the French National Institute for Agricultural Research (INRA):

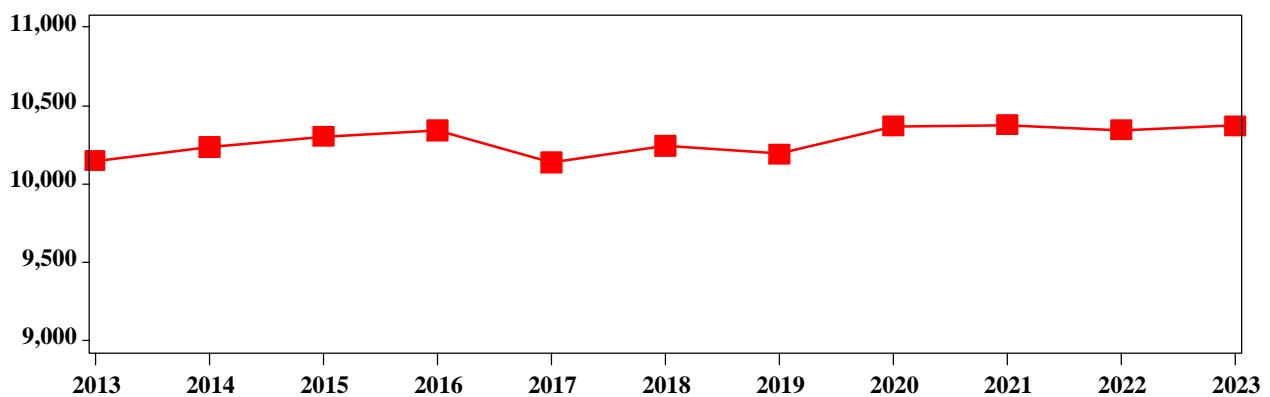

1.30 for 1st lactations ; 1.12 for 2nd lactations ; 1.03 for 3rd lactations ; 1.00 for lactations 4 and over.

1.3.4 - Distribution of non-qualified lactations by cause of non-qualification

Cause of non-qualification	Number of non-qualified lactations	%
A - Interval between calving and 1st test-date > 95 days	23,366	16.7
B - Less than 3 complete test-dates during 305 days of lactation.	80,518	57.4
C - Interval between complete test-days > 95 days	32,589	23.2
D - Average interval between all test-days over 305 lactation days \geq 75 days	3,746	2.7
Overall total	140,219	100

Proportion of new MR contracts in not qualified lactations for the cause NQ = A

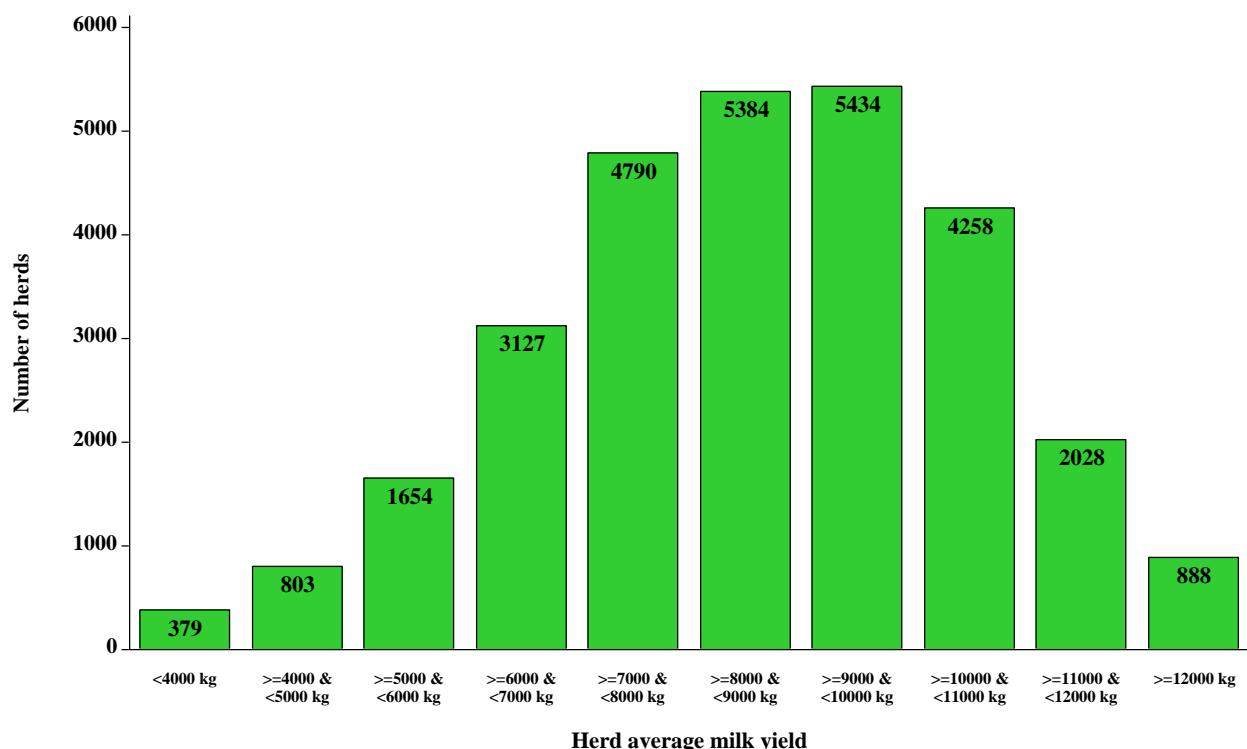

20.2%

¹Non-qualification causes from 1 to 7 correspond to lactations completed before March 9, 2020. Causes from A to D correspond to lactations completed from March 9, 2020.

Comment:

In order to adjust to adult level, a multiplying factor depending on the parity is applied to milk and contents:

- If the parity is 1, the multiplying factor is 1.30,
- If the parity is 2, the multiplying factor is 1.12,
- If the parity is 3, the multiplying factor is 1.03,
- If the parity is 4 and over, the multiplying factor is 1.

Cattle

France - Year 2023

Abstract :

CATTLE : 28,745 herds provided 1,878,620 qualified lactations in 2023. Decreasing respectively from 5.6% and 4.6% the herd number and the number of qualified lactations confirm the trend observed since several years. The three main French national breeds (Prim'Holstein, Montbéliarde and Normande) represent henceforth 89.8% of the total of qualified lactations (-0.4% compared to 2022). With 48.7 %, the percentage of herds of more than 60 qualified lactations increased again in 2023, confirming the upward trend observed for several years (48.2% in 2022, 46.8 in 2021 and 2020, 47.5 in 2019, 45.1% in 2018 and 40.1% in 2017). With an average milk production for complete lactations at 8,938Kg, the milk yield is increasing in 2023 (+60kg). In the same time the average lactation duration reach 346 days (+1 day). Mean fat and protein reaches respectivly 40.8 g/Kg (+0.2) and 32.8 g/Kg (+0.1). A noticeable improvement in somatic cell count situation is again observed. The proportion of lactations for which all the test-dates obtain cell counts lower than 300.000 cells and the proportion of lactations having at least 2 test-dates with cell counts higher than 800.000 reach respectively 58.7% et 10.2%.
