## Data processing

In paragraph 1.1.1, the number of active cows refers to cows still present on the 31st of December 2020 in a herd with active Official Milk Recording (=MR) contract and for which at least one milk record has been registered throughout the year 2020.

In paragraph 1.1.2, the number of active herds refers to herds with active Official Milk Recording contract on the 31st of December 2020 and with at least one active cow taken in account over the year (and still present in this herd on the 31st of December 2020).

Annual milk recording results (starting at paragraph 1.2) have been calculated on 31 January 2021 by the Genetic Information Processing Centre (in accordance with the French National Institute for Agricultural Research [INRA] specifications) and processed by the Institut de l'Elevage. These results take into account one lactation per cow; the last terminated one (with a calving date after January 1st, 2017). This rule involves that the primiparous still on lactation are therefore not counted up in these results.

These terminated lactations may be qualified or not. The non-qualified ones are taken into account into the calculation of the terminated lactations' overall total (see paragraph 1.1.3) and are classified according to the cause of non-qualification (cf. paragraph 1.3.2) but are not included in the calculation of milk yield and contents results.

The herds for which lactation results are calculated are the only ones taken into account in this document. This total is therefore slightly higher than the number of « active herds » (see results presented in paragraph 1.1) because it takes into account some herds that have been controlled during the previous year but were not active anymore after the 31st of December 2020.

Into the paragraph 1.3.2, the proportion of the non-qualified lactations due to cause of non-qualification 1 (i e excessively long interval between calving and the 1st test-date) related to a herd with first MR contract is determined as follows:

The first condition is that the date of beginning of the lactation, (= calving date) taken into account in the current results must be prior to the starting date of MR contract of the herd the cow belongs to (link between a cow and a herd is searched at the last test-date in milk of the cow).

In case this first condition is met, one determines whether a previous MR contract did exist for the relevant herd:

- if so, the interval between the date when the previous MR contract ended and the starting date of the next MR contract is calculated. If this interval is over 365 days long, it is considered as a first MR contract for the relevant herd,
- if not so, it is also considered as a first MR contract for the relevant herd.

Only local areas (= French « départements ») for which more than 40 lactations results counted up are in tables 3.2, 3.4 and 3.6. The results presented in tables $3.3,3.5$ and 3.7 take into account only breeds for which at least 40 lactations have been counted up in the corresponding local area.
This document has been produced with the substantial assistance in programming of Mrs N. Weiswald (Genetic Information Processing Centre in Jouy-en-Josas).

INSTITUT DE L'ELEVAGE

## Trends for 2020

34,793 herds provided 2,200,652 qualified lactations in 2020. With a decrease of $5.2 \%$ of the herd number and of $5.7 \%$ of the qualified lactations these figures confirm the trend observed since a few years.

The three main French national breeds (Prim'Holstein, Montbéliarde and Normande) represent henceforth $91 \%$ of the total of qualified lactations ( $-0.6 \%$ compared to 2019).

With $46.8 \%$ the percentage of herds with more than 60 qualified lactations slightly decrease in $2020(47.5 \%$ in 2019, $45.1 \%$ in 2018 and $40.1 \%$ in 2017). The part of the qualified lactations they represent follow the same trend and decrease to $68.6 \%$ ( $69 \%$ in $2019,66.9 \%$ in 2018 and $63.1 \%$ in 2017).

With an average milk production for complete lactations at $8,707 \mathrm{Kg}$, the milk yield is increasing in $2020(+261 \mathrm{~kg})$. In the same time the average lactation duration is increasing to reach 339 days ( +5 days).

Mean fat and protein rates reach respectively to $40.5 \mathrm{~g} / \mathrm{kg}$ for fat ( +0.4 ) and $32.8 \mathrm{~g} / \mathrm{kg}$ for proteins ( +0.3 ).
The increasing milk, fat and protein yields observed in 2020 must be seen in relation to the evolution of the causes of non-qualification in force since March 2020 and the impact of which will be to confirm in the coming years.

The noticeable improvement in somatic cell count situation observed for several years is confirmed. The proportion of lactations for which all the test-dates obtain cell counts lower than 300.000 cells and the proportion of lactations having at least 2 test-dates with cell counts higher than 800.000 reach respectively $40.8 \%$ et $12.3 \%$.

## Evolution of lactation qualification methods in 2020

Since March 9, 2020, the lactation qualification system has evolved. It now allows the qualification of lactations according to 84 methods against 44 in the previous system.

This development results on the one hand from the recognition of type 9 intervals for all protocols, which adds the AT9, BT9, BZ9 and CZ9 methods to the 44 protocols until now recognized.

On the other hand, it is completed by the creation of a second level of 36 methods called 'simplified' which are distinguished by a type exponent * added to the protocol name. This level of simplification add 6 new protocols (AT *, BT *, BZ *, CZ *, AR * and $\mathrm{BR}^{*}$ ).

At the same time, the causes of non-qualification have evolved in number (from 7 to 4 causes) and nature with in particular the creation of B cause which eliminates short lactations. (Less than 3 complete checks in 305 lactation days).

Changes in qualifications methods are taken into account in the genetic evaluations by creating weighting coefficients adapted to each qualification method.

## TABLE OF CONTENTS

I - NATIONAL RESULTS ..... 7
1.1 - Total milk recorded population ..... 7
1.1.1 - Total number of active herds on December, 31st, 2020* ..... 7
1.1.2 - Total number of active cows on December, 31st, 2020* ..... 7
1.1.3 - Terminated lactations .....  8
1.1.3.1 - Total number of herds with terminated lactations ..... 8
1.1.3.2 - Total number of terminated lactations ..... 9
1.2- Qualified lactations ..... 10
1.2.1-Complete lactations ..... 11
1.2.1.1 - Total number of herds which provided complete lactation results ..... 11
1.2.1.2 - Total number of complete lactations ..... 11
1.2.2 - Herds distribution per total number of lactations ..... 13
1.2.3 - Complete lactations per parity ..... 14
1.2.3.1 - Number and percentage of results per parity ..... 14
1.2.3.2 - Average results of complete lactations per parity (1st, 2nd, 3rd, 4th and over) ..... 14
1.2.4 - Complete lactations per month of calving - all lactations and first lactations ..... 16
1.2.5-305-d lactations (= reference lactations) ..... 17
1.2.6 - Adjusted lactations ..... 19
1.2.7 - Evolution of the individual cell count results ..... 21
1.3- Lactation qualification ..... 22
1.3.1 - Qualified lactations per qualification method ..... 22
1.3.2- Qualified lactations per milk recording method ..... 24
1.3.3- Qualified lactations per milk recording protocol ..... 24
1.3.4 - Distribution of non-qualified lactations by cause of non-qualification ..... 25
1.4 - Herd distribution per milk yield level ..... 26
II - RESULTS PER BREED ..... 27
2.1-Complete lactations - all lactations ..... 27
2.2 - Reference lactations (305-d) - all lactations ..... 28
2.3 - Adjusted lactations - all lactations ..... 29
2.4 - Adult 305-day adjusted lactations - all lactations ..... 30
2.5 - Number of pure-bred herds per breed ..... 31
2.6 - Detailed results per breed ..... 32
III - RESULTS PER LOCAL AREA (= FRENCH « DÉPARTEMENT ») ..... 58
3.1.a - Qualified lactations per protocol and local area ..... 58
3.1.b - Qualified lactations per method and local area ..... 61
3.2 - Complete lactations per local area - all breeds - all lactations ..... 64
3.3 - Complete lactations - all lactations per local area and breed ..... 66
3.4 - Complete lactations - all breeds - first lactations ..... 79
3.5 - Complete lactations - first lactations per local area and breed ..... 81
3.6-305-d lactations - all breeds - all lactations ..... 91
3.7-305-d lactations - all lactations per local area and breed ..... 93
3.8-305-d lactations - all breeds - first lactations ..... 106
3.9-305-d lactations - first lactations per local area and breed ..... 108
IV - SOMATIC CELLS COUNT RESULTS PER LOCAL AREA ..... 118

## I - NATIONAL RESULTS

## 1.1 - Total milk recorded population

### 1.1.1 - Total number of active herds on December, 31st, 2020*

## 31,435 herds

### 1.1.2 - Total number of active cows on December, 31st, 2020*

2,247,121 cows

For information about how the number of "active herds" and "active cows" is calculated, refer to «Data processing " paragraph (cf. page 4).

### 1.1.3 - Terminated lactations

These results take into account the last terminated lactation (qualified or not) of each animal (refer to paragraph « Data processing » on page 4 for further details).

### 1.1.3.1 - Total number of herds with terminated lactations

## 34,927 herds

## Herd distribution with terminated lactations per local area (= French "département")

Number of herds

$\begin{aligned} \square & >=30 \&<300 \\ > & >500 \&<1,000 \\ > & =2,000 \&<3,000\end{aligned}$

### 1.1.3.2 - Total number of terminated lactations

## 2,295,959 lactations

Distribution of terminated lactations per local area

Number of lactations

|  | $<500$ |
| ---: | :--- |
| $>=20,000 \& \&$ | $\mathbf{4 0 , 0 0 0}$ |
| $>=100,000$ |  |

[^0]INSTITUT DE L'ELEVAGE

## 1.2 - Qualified lactations

This table shows the distribution of qualified lactations according to the year of calving and of drying off.

| Year of calving | Year of drying off |  |  |  |  |  |  |  | Overall total |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 2017 |  | 2018 |  | 2019 |  | 2020 |  |  |  |
|  | Nb | \% | Nb | \% | Nb | \% | Nb | \% | Nb | \% |
| 2017 | 5,484 | 0.2 | 51,883 | 2.4 | 9,414 | 0.4 | 4,786 | 0.2 | 71,567 | 3.3 |
| 2018 |  |  | 6,353 | 0.3 | 177,754 | 8.1 | 135,886 | 6.2 | 319,993 | 14.5 |
| 2019 |  |  |  |  | 56,503 | 2.6 | 1,485,649 | 67.5 | 1,542,152 | 70.1 |
| 2020 |  |  |  |  |  |  | 266,940 | 12.1 | 266,940 | 12.1 |
| Overall total | 5,484 | 0.2 | 58,236 | 2.6 | 243,671 | 11.1 | 1,893,261 | 86.0 | 2,200,652 | 100 |

For example: 1,485,649 qualified lactations (that is to say $67.5 \%$ of the overall total) match the following criteria: a calving date in 2019 a drying off date in 2020.

### 1.2.1 - Complete lactations

These results take in account all the qualified lactations, with no delete or no kind of adjustment, whatever their duration.

### 1.2.1.1 - Total number of herds which provided complete lactation results

## 34,793 herds

### 1.2.1.2 - Total number of complete lactations

## 2,200,652 lactations

|  |  | 2020 | Variation 2020/2019 | 2019 |
| :---: | :---: | :---: | :---: | :---: |
| Number of results |  | 2,200,652 | -134,267 | 2,334,919 |
| Lactation duration | days | 339 | 4 | 335 |
| Milk yield | kg | 8,707 | 261 | 8,446 |
| Fat content | kg | 353 | 15 | 338 |
| Fat \%o | $\mathrm{g} / \mathrm{kg}$ | 40.5 | 0.4 | 40.1 |
| True protein content | kg | 286 | 12 | 274 |
| True protein | $\mathrm{g} / \mathrm{kg}$ | 32.8 | 0.3 | 32.5 |
| Protein \%o | $\mathrm{g} / \mathrm{kg}$ | 34.5 | 0.3 | 34.2 |
| True protein + fat content | kg | 638 | 25 | 613 |
| True protein + fat \% | $\mathrm{g} / \mathrm{kg}$ | 73.3 | 0.7 | 72.6 |

Milk yield - complete lactations - kg

Fat $\%$ - complete lactations - $\mathrm{g} / \mathrm{kg}$

True protein $\%_{0}$ - complete lactations - $\mathrm{g} / \mathrm{kg}$

### 1.2.2 - Herds distribution per herd size

| Herd size | Herds |  | Lactation results |  | Milk yield <br> kg | Fat \% $\mathrm{g} / \mathrm{kg}$ | True <br> protein <br> \%o <br> $\mathrm{g} / \mathrm{kg}$ | Duration <br> days |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Nb | \% | Nb | \% |  |  |  |  |
| $>=1 \&<=20$ | 3,220 | 9.3 | 25,383 | 1.2 | 7,251 | 39.9 | 32.3 | 330 |
| $>=21 \&<=30$ | 2,227 | 6.4 | 57,862 | 2.6 | 7,485 | 40.0 | 32.6 | 342 |
| $>=31 \&<=40$ | 3,681 | 10.6 | 131,751 | 6.0 | 7,880 | 40.1 | 32.7 | 343 |
| $>=41 \&<=50$ | 4,683 | 13.5 | 213,720 | 9.7 | 8,162 | 40.3 | 32.7 | 342 |
| $>=51 \&<=60$ | 4,715 | 13.6 | 261,414 | 11.9 | 8,511 | 40.5 | 32.8 | 343 |
| $>=61 \&<=80$ | 7,443 | 21.4 | 519,167 | 23.6 | 8,733 | 40.6 | 32.8 | 340 |
| $>=81 \&<=100$ | 4,047 | 11.6 | 362,129 | 16.5 | 8,882 | 40.6 | 32.8 | 338 |
| $>100$ | 4,777 | 13.7 | 629,226 | 28.6 | 9,198 | 40.5 | 32.8 | 335 |
| Overall total | 34,793 | 100 | 2,200,652 | 100 | 8,707 | 40.5 | 32.8 | 339 |

### 1.2.3 - Complete lactations per parity

### 1.2.3.1 - Number and percentage of results per parity

| Parity | Number | $\%$ |
| :--- | :---: | :---: |
| 1st lactation | 742,038 | 33.7 |
| 2nd lactation | 584,577 | 26.6 |
| 3rd lactation | 395,795 | 18.0 |
| 4th lactation | 247,278 | 11.2 |
| 5th lactation | 129,852 | 5.9 |
| 6th lactation | 60,314 | 2.7 |
| 7th lactation | 24,900 | 1.1 |
| Lactation 8 and over | 15,898 | 0.7 |
| Overall total | $2,200,652$ | 100 |

| Average parity | 2.5 |
| :--- | :--- |

1.2.3.2 - Average results of complete lactations per parity (1st, 2nd, 3rd, 4th and over)

| Parity | 1 | 2 | 3 | 4 and over |
| :---: | :---: | :---: | :---: | :---: |
| Number of results | 742,038 | 584,577 | 395,795 | 478,242 |
| \% of the results | 33.7 | 26.6 | 18.0 | 21.7 |
| Lactation duration days | 345 | 342 | 339 | 326 |
| Milk yield $k g$ | 7,987 | 9,121 | 9,373 | 8,769 |
| Fat content $k g$ | 322 | 371 | 381 | 353 |
| Fat \%on $\quad \mathrm{g} / \mathrm{kg}$ | 40.3 | 40.7 | 40.7 | 40.3 |
| True protein content kg | 263 | 302 | 306 | 284 |
| True protein \%o g/kg | 32.9 | 33.1 | 32.7 | 32.3 |
| True protein + fat content kg | 585 | 673 | 688 | 637 |
| True protein + fat \% ${ }^{\text {a }}$ g/kg | 73.3 | 73.8 | 73.4 | 72.6 |

Fat $\%$ - complete lactations - $\mathrm{g} / \mathrm{kg}$

True protein $\%_{0}$ - complete lactations - $\mathrm{g} / \mathrm{kg}$

### 1.2.4 - Complete lactations per month of calving - all lactations and first lactations

|  | All lactations |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Month of calving | Number of lactations | \% | Lactation duration days | Milk yield kg | Fat content $k g$ kg | $\begin{gathered} \text { Fat } \\ \% \text { \%o } \\ g / k g \end{gathered}$ | True protein content kg | True protein \% $\mathrm{g} / \mathrm{kg}$ | Fat + true protein content kg | Fat + true protein \% $\mathrm{g} / \mathrm{kg}$ |
| January | 185,083 | 8.4 | 334 | 8,636 | 347 | 40.1 | 281 | 32.5 | 627 | 72.6 |

| December | 72,571 | 9.8 | 338 | 7,838 | 313 | 39.9 | 257 | 32.7 | 570 | 72.7 |
| Overall total | 742,038 | 100 | 345 | 7,987 | 322 | 40.3 | 263 | 32.9 | 585 | 73.3 |

### 1.2.5-305-d lactations (= reference lactations)

Two scenarios are possible for calculating the reference lactations:

1. The complete lactation exceeds the reference period (305 days). In this case, the results of the reference are calculated by interpolation, using the Fleischmann method.
2. Complete lactation does not exceed the reference period. In this case, the results of the reference lactation are those of the complete lactation.

|  | $\mathbf{2 0 2 0}$ | 2019 |  |
| :--- | :---: | :---: | :---: |
| Mill yield | kg | $\mathbf{7 , 6 0 2}$ | 7,383 |
| Fat content | kg | $\mathbf{3 0 3}$ | 291 |
| Fat $\% \mathbf{0}$ | $\mathbf{3 9 . 9}$ | 39.5 |  |
| True protein content | $\mathrm{g} / \mathrm{kg}$ | $\mathbf{2 4 5}$ | 236 |
| True protein $\% \mathbf{k g}$ | $\mathbf{3 2 . 2}$ | 31.9 |  |
| Fat + true protein content | $\mathrm{g} / \mathrm{kg}$ | kg | $\mathbf{5 4 8}$ |
| Fat + true protein $\% \mathrm{~m}$ | $\mathrm{~g} / \mathrm{kg}$ | $\mathbf{7 2 . 1}$ | 527 |

Fat \% - 305-d lactations - g/kg

True protein $\%$ - $305-\mathrm{d}$ lactations - $\mathrm{g} / \mathrm{kg}$

### 1.2.6 - Adjusted lactations

Steps taken to obtain these results:
Firstly, exclusion of the lactations with duration lower than 200 days (representing 173,161 lactations, that is to say $7.9 \%$ of the total number).
Secondly, the remaining lactations are adjusted to adult level by multiplying the results for parity 1 to 3 by the following coefficients defined by the French National Institute for Agricultural Research (INRA):
1.30 for 1 st lactations; 1.12 for 2 nd lactations; 1.03 for 3 rd lactations; 1.00 for lactations 4 and over.

|  |  | 2020 | 2019 |
| :---: | :---: | :---: | :---: |
| Complete lactations | Nb | 2,200,652 | 2,334,919 |
| Adjusted lactations | Nb | 2,027,491 | 2,128,972 |
|  | \% | 92\% | 91\% |
| Lactation duration | days | 357 | 356 |
| Milk yield | kg | 10,370 | 10,193 |
| Fat content | kg | 420 | 409 |
| Fat \% | $\mathrm{g} / \mathrm{kg}$ | 40.5 | 40.1 |
| True protein content | kg | 341 | 332 |
| True protein \% | $\mathrm{g} / \mathrm{kg}$ | 32.9 | 32.6 |
| Fat + true protein content | kg | 761 | 740 |
| Fat + true protein \% | $\mathrm{g} / \mathrm{kg}$ | 73.4 | 72.6 |

Number of adjusted lactations

Fat $\%$ - adjusted lactations - $\mathrm{g} / \mathrm{kg}$

True protein $\%$ - adjusted lactations $-\mathrm{g} / \mathrm{kg}$

### 1.2.7 - Evolution of the individual cell count results

| Year | Lactations with |  |  |  |  |  | Overall total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\begin{aligned} & \text { At least } 2 \text { test-dates with } \\ & \text { cell count }>=800,000 \end{aligned}$ |  | All the test-dates with cell count $<\mathbf{3 0 0 , 0 0 0}$ |  | Intermediate somatic cell counts |  |  |
|  | Nb | \% | Nb | \% | Nb | \% |  |
| 2010 | 400,839 | 16.0 | 1,055,963 | 42.3 | 1,042,187 | 41.7 | 2,498,989 |
| 2011 | 413,276 | 16.3 | 1,077,970 | 42.4 | 1,048,912 | 41.3 | 2,540,158 |
| 2012 | 405,313 | 16.2 | 1,049,558 | 41.9 | 1,051,072 | 41.9 | 2,505,943 |
| 2013 | 393,158 | 15.7 | 1,070,375 | 42.7 | 1,046,094 | 41.7 | 2,509,627 |
| 2014 | 415,073 | 16.1 | 1,089,574 | 42.4 | 1,067,377 | 41.5 | 2,572,024 |
| 2015 | 387,179 | 15.1 | 1,143,536 | 44.6 | 1,031,468 | 40.3 | 2,562,183 |
| 2016 | 351,106 | 14.1 | 1,154,341 | 46.4 | 982,703 | 39.5 | 2,488,150 |
| 2017 | 322,706 | 13.5 | 1,143,090 | 47.8 | 927,988 | 38.8 | 2,393,784 |
| 2018 | 325,037 | 13.6 | 1,140,258 | 47.8 | 918,244 | 38.5 | 2,383,539 |
| 2019 | 296,944 | 12.7 | 1,157,271 | 49.6 | 880,704 | 37.7 | 2,334,919 |
| 2020 | 271,132 | 12.3 | 1,117,590 | 50.8 | 811,930 | 36.9 | 2,200,652 |

Compared to 2019, the percentage of lactations with at least 2 test-dates $>800,000$ cells decreases of $-0.4 \%$ in 2020 , whereas the percentage of lactations with all test-dates $<300,000$ cells increases of $1.2 \%$.

*Protein \% = Nitrogen \%

## Comment:

In order to adjust to adult level, a multiplying factor depending on the parity is applied to milk and contents:

- If the parity is 1 , the multiplying factor is 1.30 ,
- If the parity is 2 , the multiplying factor is 1.12 ,
- If the parity is 3 , the multiplying factor is 1.03 ,
- If the parity is 4 and over, the multiplying factor is 1 .

## 2.5 - Number of pure-bred herds per breed

| Breed | Number of herds | Number of lactations | Pure-bred herds ${ }^{1}$ |  | Lactations of pure-bred herds ${ }^{1}$ |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## Milk recording results - Dairy Cattle France 2020

34,793 herds provided 2,200,652 qualified lactations in 2020. With a decrease of $5.2 \%$ of the herd number and of $5.7 \%$ of the qualified lactations these figures confirm the trend observed since a few years. The three main French national breeds (Prim'Holstein, Montbéliarde and Normande) represent henceforth $91 \%$ of the total of qualified lactations ( $-0.6 \%$ compared to 2019). With $46.8 \%$ the percentage of herds with more than 60 qualified lactations slightly decrease in $2020(47.5 \%$ in $2019,45.1 \%$ in 2018 and $40.1 \%$ in 2017). The part of the qualified lactations they represent follow the same trend and decrease to $68.6 \%$ ( $69 \%$ in 2019, $66.9 \%$ in 2018 and $63.1 \%$ in 2017). With an average milk production for complete lactations at $8,707 \mathrm{Kg}$, the milk yield is increasing in 2020 (+ 261 kg ). In the same time the average lactation duration is increasing to reach 339 days ( +5 days). Mean fat and protein rates reach respectively to $40.5 \mathrm{~g} / \mathrm{kg}$ for fat (+0.4) and $32.8 \mathrm{~g} / \mathrm{kg}$ for proteins (+0.3). The increasing milk, fat and protein yields observed in 2020 must be seen in relation to the evolution of the causes of non-qualification in force since March 2020 and the impact of which will be to confirm in the coming years. The noticeable improvement in somatic cell count situation observed for several years is confirmed. The proportion of lactations for which all the test-dates obtain cell counts lower than 300.000 cells and the proportion of lactations having at least 2 test-dates with cell counts higher than 800.000 reach respectively $40.8 \%$ et $12.3 \%$.
